Chapter

1

Introduction

Overview

This manual describes how to monitor Cisco Meeting Server devices in SL1 using the *Cisco: Meeting Server PowerPack*.

The following sections provide an overview of Cisco Meeting Server and the *Cisco: Meeting Server PowerPack*:

This chapter covers the following topics:

What is Cisco Meeting Server?	3
What Does the Cisco: Meeting Server PowerPack Monitor?	4
Installing the Cisco: Meeting Server PowerPack	4

NOTE: ScienceLogic provides this documentation for the convenience of ScienceLogic customers. Some of the configuration information contained herein pertains to third-party vendor software that is subject to change without notice to ScienceLogic. ScienceLogic makes every attempt to maintain accurate technical information and cannot be held responsible for defects or changes in third-party vendor software. There is no written or implied guarantee that information contained herein will work for all third-party variants. See the End User License Agreement (EULA) for more information.

What is Cisco Meeting Server?

Cisco Meeting Server is a conferencing solution that allows collaboration through secure video, audio, and web communication. Cisco Meeting Server integrates with a variety of third-party platforms across both cloud and hybrid environments.

What Does the Cisco: Meeting Server PowerPack Monitor?

To monitor Cisco Meeting Server devices using SL1SL1, you must install the *Cisco: Meeting Server PowerPack*. This PowerPack enables you to discover, model, and collect data about Meeting Server devices.

The *Cisco: Meeting Server PowerPack* includes:

- Dynamic Applications that discover, model, and monitor performance metrics and collect configuration data for Cisco Meeting Server devices
- A Device Class for Cisco Meeting Server applications and devices SL1SL1 monitors
- Event Policies and corresponding alerts that are triggered when Meeting Server devices meet certain status criteria

Installing the Cisco: Meeting Server PowerPack

Before completing the steps in this manual, you must import and install the latest version of the *Cisco: Meeting Server PowerPack*.

TIP: By default, installing a new version of a PowerPack overwrites all content from a previous version of that PowerPack that has already been installed on the target system. You can use the **Enable Selective PowerPack Field Protection** setting in the **Behavior Settings** page (System > Settings > Behavior) to prevent new PowerPacks from overwriting local changes for some commonly customized fields. (For more information, see the **System Administration** manual.)

IMPORTANT: The minimum required MySQL version is 5.6.0.

To download and install the PowerPack:

1. Search for and download the PowerPack from the **PowerPacks** page (Product Downloads > PowerPacks & SyncPacks) at the [ScienceLogic Support Site](#).
2. In SL1, go to the **PowerPacks** page (System > Manage > PowerPacks).
3. Click the **[Actions]** button and choose *Import PowerPack*. The **Import PowerPack** dialog box appears.
4. Click **[Browse]** and navigate to the PowerPack file from step 1.
5. Select the PowerPack file and click **[Import]**. The **PowerPack Installer** modal displays a list of the PowerPack contents.
6. Click **[Install]**. The PowerPack is added to the **PowerPacks** page.

NOTE: If you exit the **PowerPack Installer** modal without installing the imported PowerPack, the imported PowerPack will not appear in the **PowerPacks** page. However, the imported PowerPack will appear in the **Imported PowerPacks** modal. This page appears when you click the **[Actions]** menu and select *Install PowerPack*.

Chapter

2

Configuration and Discovery

Overview

The following sections describe how to configure and discover Cisco Meeting Server for monitoring by SL1 using the *Cisco: Meeting Server PowerPack*:

This chapter covers the following topics:

<i>Prerequisites for Monitoring Cisco Meeting Server</i>	6
<i>Creating Credentials for Cisco Meeting Server Systems Using a Single IP Address</i>	7
<i>Creating Credentials for Cisco Meeting Server Systems Using More than One IP Address</i>	8
<i>Discovering Cisco Meeting Server Component Devices</i>	9
<i>Verifying Discovery and Dynamic Application Alignment</i>	17

Prerequisites for Monitoring Cisco Meeting Server

To monitor the Cisco Meeting Server, you must be able to access both the Cisco Meeting Server Mainboard Management Processor (MMP) and the Cisco Meeting Server API. Accessing the MMP requires an account with admin access. If you wish to create a new user with admin access, refer to the section "MMP User Account Commands" in the [Cisco Meeting Server MMP Command Line Reference](#) document.

You access the Cisco Meeting Server MMP through SSH, while you access the Cisco Meeting Server API through HTTPS.

- If you can reach both of these through the same IP address, you can typically use a *single Basic/Snippet credential*.
- If the two interfaces have separate IP addresses, or if the API is listening on a port other than 443, you must *create two separate credentials*. In addition, you should include an SNMP credential as part of discovery to correctly classify the device .

Creating Credentials for Cisco Meeting Server Systems Using a Single IP Address

To monitor Cisco Meeting Server in SL1 in an environment where you can access the Cisco Meeting Server MMP and the Cisco Meeting Server API through the same IP address, you must configure a Basic/Snippet credential and a standard SNMP credential that SL1 can use to discover and communicate with Cisco Meeting Server devices.

To configure the Basic/Snippet credential for Cisco: Meeting Server:

1. Go to the **Credential Management** page (System > Manage > Credentials).
2. Locate the **Cisco Meeting Server Example** credential, and then click its wrench icon (). The **Edit Basic/Snippet Credential** modal page appears.
3. Supply values in the following fields:
 - **Credential Name**. Type a new name for the credential.
 - **Hostname/IP**. Type "%D".
 - **Port**. Type "22".
 - **Timeout(ms)**. Type "15000".
 - **Username**. Type the username for the Cisco Meeting Server account with admin access.
 - **Password**. Type the password associated with the admin account.
4. Click the **[Save As]** button.

To configure the SNMP credential for Cisco: Meeting Server:

1. Go to the **Credential Management** page (System > Manage > Credentials).
2. Click the **[Actions]** button and select *Create SNMP Credential*. The **Credential Editor** page appears.
3. Supply values in the following fields:
 - **Profile Name**. Name of the credential. Can be any combination of alphanumeric characters. This field is required.
 - **SNMP Version**. SNMP version. Choices are *SNMP V1*, *SNMP V2*, and *SNMP V3*. The default value is *SNMP V2*. This field is required.
 - **Port**. The port SL1 will use to communicate with the external device or application. The default value is *161*. This field is required.
 - **Timeout (ms)**. Time, in milliseconds, after which SL1 will stop trying to communicate with the SNMP device. The default value is *1500*. This field is required.
 - **Retries**. Number of times SL1 will try to authenticate and communicate with the external device. The default value is *1*. This field is required.
4. Click the **[Save]** button to save the new SNMP credential.

Creating Credentials for Cisco Meeting Server Systems Using More than One IP Address

To monitor Cisco Meeting Server in SL1 in an environment where you access the Cisco Meeting Server MMP and the Cisco Meeting Server API through multiple IP addresses, you must configure a Basic/Snippet credential **for each interface** and a standard SNMP credential that SL1 can use to discover and communicate with Cisco Meeting Server devices.

You will need to manually align the associated Dynamic Applications with the corresponding Basic/Snippet credentials after discovery is complete.

To configure the Basic/Snippet credential for the system's Mainboard Management Processor (MMP)/SSH interface:

1. Go to the **Credential Management** page (System > Manage > Credentials).
2. Click the **[Actions]** button and select *Create Basic/Snippet Credential*. The **Credential Editor** page appears.
3. Supply values in the following fields:
 - **Credential Name**. Type a new name for the credential.
 - **Hostname/IP**. Type the IP address of the SSH interface.
 - **Port**. Type "22". This is the default value, but you can adjust it depending on your environment.
 - **Timeout(ms)**. Type "15000". You can adjust this value depending on your environment.
 - **Username**. Type the username for the Cisco Meeting Server account with admin access.
 - **Password**. Type the password associated with the above account.
4. Click the **[Save As]** button.

To configure the Basic/Snippet credential for the API interface:

1. Go to the **Credential Management** page (System > Manage > Credentials).
2. Click the **[Actions]** button and select *Create Basic/Snippet Credential*. The **Credential Editor** page appears.
3. Supply values in the following fields:
 - **Credential Name**. Type a new name for the credential.
 - **Hostname/IP**. Type the IP address of the API interface.
 - **Port**. Type "443".
 - **Timeout(ms)**. Type "15000". This value can be adjusted depending on your environment.
 - **Username**. Type the username for the Cisco Meeting Server account with admin access or the account with api access.
 - **Password**. Type the password associated with the above account.
4. Click the **[Save As]** button.

To configure the SNMP credential for Cisco: Meeting Server:

1. Go to the **Credential Management** page (System > Manage > Credentials).
2. Click the **[Actions]** button and select *Create SNMP Credential*. The **Credential Editor** page appears.
3. Supply values in the following fields:
 - **Profile Name**. Name of the credential. Can be any combination of alphanumeric characters. This field is required.
 - **SNMP Version**. SNMP version. Choices are *SNMP V1*, *SNMP V2*, and *SNMP V3*. The default value is *SNMP V2*. This field is required.
 - **Port**. The port SL1 will use to communicate with the external device or application. The default value is *161*. This field is required.
 - **Timeout (ms)**. Time, in milliseconds, after which SL1 will stop trying to communicate with the SNMP device. The default value is *1500*. This field is required.
 - **Retries**. Number of times SL1 will try to authenticate and communicate with the external device. The default value is *1*. This field is required.
4. Click the **[Save]** button to save the new SNMP credential.

Discovering Cisco Meeting Server Component Devices

The following sections describe how to discover Cisco Meeting Server devices. Discovery methods are described for devices that use a single IP address as well as those that use multiple IP addresses.

Discovering Cisco Meeting Server Devices That Use a Single IP Address

To model and monitor your Cisco Meeting Server devices, you must run a discovery session to discover the Cisco Meeting Server component devices that SL1 will use as the root devices for monitoring the applications.

After the discovery session completes, the Dynamic Applications in the *Cisco: Meeting Server PowerPack* automatically align to the component device, and then the PowerPack discovers, models, and monitors the remaining Cisco Meeting Server devices.

To discover the devices that you want to monitor:

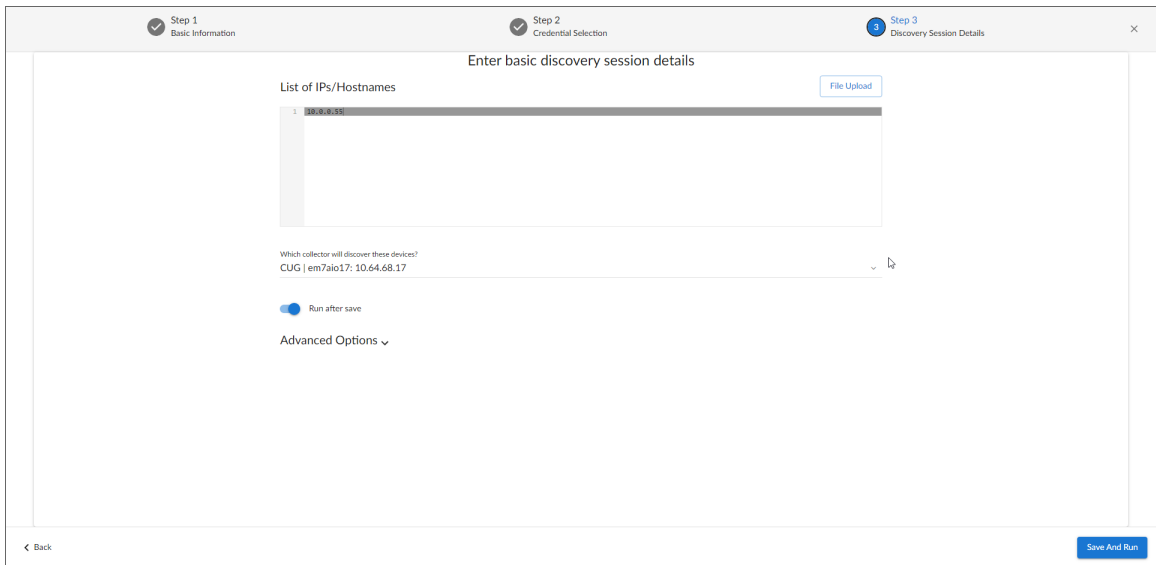

1. On the **Devices** page (🖨️) or the **Discovery Sessions** page (Devices > Discovery Sessions), click the **[Add Devices]** button. The **Select** page appears:

2. Click the **[Unguided Network Discovery]** button. Additional information about the requirements for discovery appears in the **General Information** pane to the right.
3. Click **[Select]**. The **Add Devices** page appears.
4. Complete the following fields:
 - **Name**. Type a unique name for this discovery session. This name is displayed in the list of discovery sessions on the **[Discovery Sessions]** tab.
 - **Description**. Optional. Type a short description of the discovery session. You can use the text in this description to search for the discovery session on the **[Discovery Sessions]** tab.
 - **Select the organization to add discovered devices to**. Select the name of the organization to which you want to add the discovered devices
5. Click **[Next]**. The **Credentials** page of the **Add Devices** wizard appears:

6. On the **Credentials** page, select the SNMP credential and the Basic/Snippet credential you created.
7. Click **[Next]**. The **Discovery Session Details** page of the **Add Devices** wizard appears:

8. Complete the following fields:
 - **List of IPs/Hostnames.** Type the IP address or hostname for the set of Cisco Meeting Server devices that you want to monitor.
 - **Which collector will monitor these devices?.** Required. Select an existing collector to monitor the discovered devices.
 - **Run after save.** Select this option to run this discovery session as soon as you save the session.

In the **Advanced options** section, click the down arrow icon (▼) to complete the following fields:

- **Discover Non-SNMP.** Enable this setting.
 - **Model Devices.** Enable this setting.
9. Click **[Save and Run]** if you enabled the Run after save setting, or **[Save and Close]** to save the discovery session. The **Discovery Sessions** page (Devices > Discovery Sessions) displays the new discovery session.
 10. If you selected the **Run after save** option on this page, the discovery session runs, and the **Discovery Logs** page displays any relevant log messages. If the discovery session locates and adds any devices, the **Discovery Logs** page includes a link to the **Device Investigator** page for the discovered device.

Discovering Cisco Meeting Server Devices That Use a Single IP Address in the SL1 Classic User Interface

To model and monitor your Cisco Meeting Server devices, you must run a discovery session to discover the Cisco Meeting Server component devices that SL1 will use as the root devices for monitoring the applications.

After the discovery session completes, the Dynamic Applications in the *Cisco: Meeting Server PowerPack* automatically align to the component device, and then the PowerPack discovers, models, and monitors the remaining Cisco Meeting Server devices.

To discover the devices that you want to monitor:

1. Go to the **Discovery Control Panel** page (System > Manage > Classic Discovery).
2. On the **Discovery Control Panel**, click the **[Create]** button.
3. The **Discovery Session Editor** page appears. On the **Discovery Session Editor** page, define values in the following fields:
 - **IP Address/Hostname Discovery List.** Type the IP address or hostname for the set of Cisco Meeting Server devices that you want to monitor.
 - **SNMP Credentials.** Select the SNMP credential you created.
 - **Other Credentials.** Select the Basic/Snippet credential you created.
 - **Discover Non-SNMP.** Select this checkbox.
 - **Model Devices.** Select this checkbox.
4. Optionally, you can enter values in the other fields on this page. For more information about the other fields on this page, see the *Discovery & Credentials* manual.
5. Click the **[Save]** button, and then close the **Discovery Session Editor** window.
6. The discovery session you created appears at the top of the **Discovery Control Panel** page. Click its lightning-bolt icon () to run the discovery session.
7. After the Cisco Meeting Server devices are discovered, click the device icon () to view the **Device Properties** page for each device.

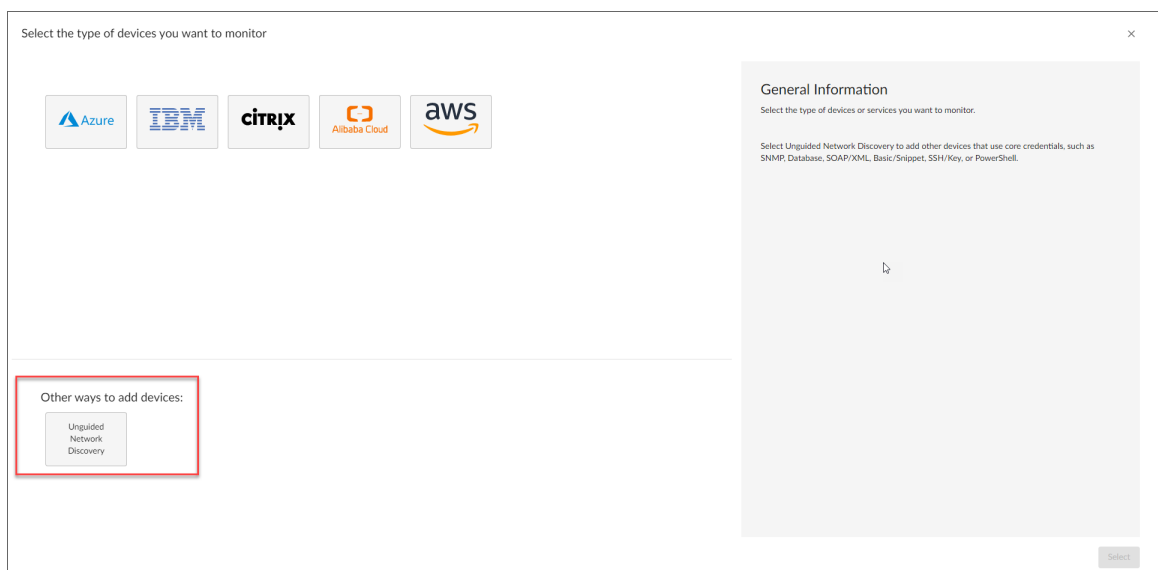

Discovering Cisco Meeting Server Devices That Use Multiple IP Addresses

To model and monitor your Cisco Meeting Server devices, you must run a discovery session to discover the Cisco Meeting Server component devices that SL1 will use as the root devices for monitoring the applications.

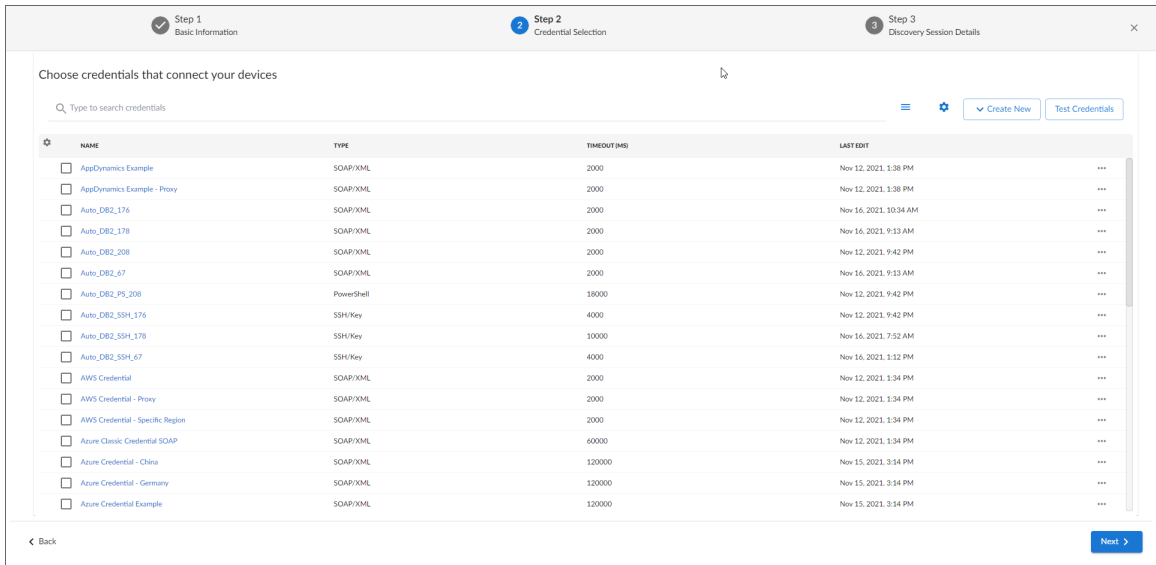

In an environment where you access the Cisco Meeting Server MMP and the Cisco Meeting Server API through multiple IP addresses, after the discovery session completes, you must manually align the Dynamic Applications associated with each Basic/Snippet credential you created.

To discover the devices that you want to monitor:

1. On the **Devices** page (📱) or the **Discovery Sessions** page (Devices > Discovery Sessions), click the **[Add Devices]** button. The **Select** page appears:

2. Click the **[Unguided Network Discovery]** button. Additional information about the requirements for discovery appears in the **General Information** pane to the right.
3. Click **[Select]**. The **Add Devices** page appears.
4. Complete the following fields:
 - **Name**. Type a unique name for this discovery session. This name is displayed in the list of discovery sessions on the **[Discovery Sessions]** tab.
 - **Description**. Optional. Type a short description of the discovery session. You can use the text in this description to search for the discovery session on the **[Discovery Sessions]** tab.
 - **Select the organization to add discovered devices to**. Select the name of the organization to which you want to add the discovered devices
5. Click **[Next]**. The **Credentials** page of the **Add Devices** wizard appears:

6. On the **Credentials** page, select the SNMP credential and the Basic/Snippet credential you created.
7. Click **[Next]**. The **Discovery Session Details** page of the **Add Devices** wizard appears:

8. Complete the following fields:
 - **List of IPs/Hostnames.** Type the IP address or hostname for the set of Cisco Meeting Server devices that you want to monitor.
 - **Which collector will monitor these devices?** Required. Select an existing collector to monitor the discovered devices.
 - **Run after save.** Select this option to run this discovery session as soon as you save the session.

In the **Advanced options** section, click the down arrow icon (▼) to complete the following fields:

- **Discover Non-SNMP**. Enable this setting.
 - **Model Devices**. Enable this setting.
9. Click **[Save and Run]** if you enabled the Run after save setting, or **[Save and Close]** to save the discovery session. The **Discovery Sessions** page (Devices > Discovery Sessions) displays the new discovery session.
 10. If you selected the **Run after save** option on this page, the discovery session runs, and the **Discovery Logs** page displays any relevant log messages. If the discovery session locates and adds any devices, the **Discovery Logs**
 11. After the Cisco Meeting Server devices are discovered, go to the classic **Device Manager** page (Devices > Device Manager) and locate the discovered devices.
 12. Click on the wrench icon () to view the **Device Properties** page for each device.
 13. In the **Device Properties** page, click the **[Collections]** tab. The **Dynamic Application Collections** page appears.
 14. Click **[Actions]** and then select *Add Dynamic Application* from the menu. The **Dynamic Application Alignment** page appears.
 15. In the **Dynamic Applications** field, select the following Dynamic Applications:
 - Cisco: Meeting Server Network Interface Cache
 - Cisco: Meeting Server NTP Cache
 - Cisco: Meeting Server System ID Cache
 16. In the **Credentials** field, select the Basic/Snippet credential you configured for the MMP/SSH.
 17. Click **[Save]**.
 18. Click **[Action]** and then select *Add Dynamic Application* from the menu. The **Dynamic Application Alignment** page appears.
 19. In the **Dynamic Applications** field, select the following Dynamic Applications:
 - Cisco: Meeting Server Alarms Configuration
 - Cisco: Meeting Server CoSpaces Cache
 - Cisco: Meeting Server System Status Cache
 - Cisco: Meeting Server Tenants Cache
 20. In the **Credentials** field, select the Basic/Snippet credential you configured for the API interface.
 21. Click **[Save]**.
 22. Click **[Action]** and then select *Add Dynamic Application* from the menu. The **Dynamic Application Alignment** page appears.
 23. In the **Dynamic Applications** field, select the following Dynamic Applications:

- Cisco: Meeting Server System Configuration
 - Cisco: Meeting Server System Performance
24. These applications do not require an associated credential.
 25. Click **[Save]**. A few minutes after aligning the Dynamic Applications, SL1 will discover and model your Cisco Meeting Server and automatically align other Dynamic Applications to the devices in the system.

Discovering Cisco Meeting Server Devices That Use Multiple IP Addresses in the SL1 Classic User Interface

To model and monitor your Cisco Meeting Server devices, you must run a discovery session to discover the Cisco Meeting Server component devices that SL1 will use as the root devices for monitoring the applications.

In an environment where you access the Cisco Meeting Server MMP and the Cisco Meeting Server API through multiple IP addresses, after the discovery session completes, you must manually align the Dynamic Applications associated with each Basic/Snippet credential you created.

To discover the devices that you want to monitor:

1. Go to the **Discovery Control Panel** page (System > Manage > Classic Discovery).
2. On the **Discovery Control Panel**, click the **[Create]** button.
3. The **Discovery Session Editor** page appears. On the **Discovery Session Editor** page, define values in the following fields:
 - **IP Address/Hostname Discovery List**. Type the IP address or hostname for the set of Cisco Meeting Server devices that you want to monitor.
 - **SNMP Credentials**. Select the SNMP credential you created.
 - **Other Credentials**. Select the Basic/Snippet credential you created.
 - **Discover Non-SNMP**. Select this checkbox.
 - **Model Devices**. Select this checkbox.
4. Optionally, you can enter values in the other fields on this page. For more information about the other fields on this page, see the **Discovery & Credentials** manual.
5. Click the **[Save]** button, and then close the **Discovery Session Editor** window.
6. The discovery session you created appears at the top of the **Discovery Control Panel** page. Click its lightning-bolt icon () to run the discovery session.
7. After the Cisco Meeting Server devices are discovered, click the device icon () to view the **Device Properties** page for each device.
8. In the **Device Properties** page, click the **[Collections]** tab. The **Dynamic Application Collections** page appears.
9. Click **[Action]** and then select *Add Dynamic Application* from the menu. The **Dynamic Application Alignment** page appears.
10. In the **Dynamic Applications** field, select the following Dynamic Applications:

- Cisco: Meeting Server Network Interface Cache
 - Cisco: Meeting Server NTP Cache
 - Cisco: Meeting Server System ID Cache
11. In the **Credentials** field, select the Basic/Snippet credential you configured for the MMP/SSH.
 12. Click **[Save]**.
 13. Click **[Action]** and then select *Add Dynamic Application* from the menu. The **Dynamic Application Alignment** page appears.
 14. In the **Dynamic Applications** field, select the following Dynamic Applications:
 - Cisco: Meeting Server Alarms Configuration
 - Cisco: Meeting Server CoSpaces Cache
 - Cisco: Meeting Server System Status Cache
 - Cisco: Meeting Server Tenants Cache
 15. In the **Credentials** field, select the Basic/Snippet credential you configured for the API interface.
 16. Click **[Save]**.
 17. Click **[Action]** and then select *Add Dynamic Application* from the menu. The **Dynamic Application Alignment** page appears.
 18. In the **Dynamic Applications** field, select the following Dynamic Applications:
 - Cisco: Meeting Server System Configuration
 - Cisco: Meeting Server System Performance
 19. These applications do not require an associated credential.
 20. Click **[Save]**. A few minutes after aligning the Dynamic Applications, SL1 will discover and model your Cisco Meeting Server and automatically align other Dynamic Applications to the devices in the system.

Verifying Discovery and Dynamic Application Alignment

To verify that SL1 has automatically aligned the correct Dynamic Applications during discovery *using a single IP address*:

1. After discovery has completed, from the **Device Investigator** page for the Cisco Meeting Server, click the **[Collections]** tab. The **Dynamic Application Collections** page appears.
2. All applicable Dynamic Applications for the switch are automatically aligned during discovery.

NOTE: It can take several minutes after the discovery session has completed for Dynamic Applications to appear in the **Dynamic Application Collections** page.

You should see the following Dynamic Applications aligned to the Cisco Meeting Server:

- Cisco: Meeting Server Network Interface Cache
- Cisco: Meeting Server NTP Cache
- Cisco: Meeting Server System ID Cache
- Cisco: Meeting Server Alarms Configuration
- Cisco: Meeting Server CoSpaces Cache
- Cisco: Meeting Server System Status Cache
- Cisco: Meeting Server Tenants Cache
- Cisco: Meeting Server System Configuration
- Cisco: Meeting Server System Performance

If the listed Dynamic Applications have not been automatically aligned during discovery, you can align them manually.

To manually align Dynamic Applications:

1. Go to the classic **Device Manager** page (Devices > Device Manager), locate the Cisco Meeting Server device and select its wrench icon () .
2. Click the **[Collections]** tab.
3. Click the **[Action]** button and then select *Add Dynamic Application*. The **Dynamic Application Alignment** page appears.
4. In the **Dynamic Applications** field, select the Dynamic Application you want to align.
5. In the **Credentials** field, select the appropriate credential.
6. Click the **[Save]** button.
7. Repeat steps 1-4 for the other unaligned Dynamic Applications.

Verifying Discovery and Dynamic Application Alignment in the SL1 Classic User Interface

To verify that SL1 has automatically aligned the correct Dynamic Applications during discovery *using a single IP address*:

1. After discovery has completed, click the device icon for the Cisco Meeting Server (). From the **Device Properties** page for the Cisco Meeting Server, click the **[Collections]** tab. The **Dynamic Application Collections** page appears.
2. All applicable Dynamic Applications for the switch are automatically aligned during discovery.

NOTE: It can take several minutes after the discovery session has completed for Dynamic Applications to appear in the **Dynamic Application Collections** page.

You should see the following Dynamic Applications aligned to the Cisco Meeting Server:

- Cisco: Meeting Server Network Interface Cache
- Cisco: Meeting Server NTP Cache
- Cisco: Meeting Server System ID Cache
- Cisco: Meeting Server Alarms Configuration
- Cisco: Meeting Server CoSpaces Cache
- Cisco: Meeting Server System Status Cache
- Cisco: Meeting Server Tenants Cache
- Cisco: Meeting Server System Configuration
- Cisco: Meeting Server System Performance

If the listed Dynamic Applications have not been automatically aligned during discovery, you can align them manually.

To manually align Dynamic Applications:

1. Click the **[Action]** button and then select *Add Dynamic Application*. The **Dynamic Application Alignment** page appears.
2. In the **Dynamic Applications** field, select the Dynamic Application you want to align.
3. In the **Credentials** field, select the appropriate credential.
4. Click the **[Save]** button.
5. Repeat steps 1-4 for the other unaligned Dynamic Applications.
