# 1

## Creating a Customer Dashboard

---

### Overview

This chapter describes how an administrative user can create a dashboard that can be viewed by customers.

Use the following menu options to navigate the SL1 user interface:

- To view a pop-out list of menu options, click the menu icon (.
- To view a page containing all of the menu options, click the Advanced menu icon (.

**NOTE:** To prevent customers from editing shared dashboards, you should grant customers "view" access only to these dashboards.

This chapter includes the following topics:

<i>Creating a User Account for Creating Dashboards</i> .....	4
<i>Creating an Access Key to Control Dashboard Access</i> .....	5
<i>Creating a Dashboard that Enforces Organization Restrictions</i> .....	7
<i>Locking and Sharing the Dashboard</i> .....	19
<i>Example Dashboard View</i> .....	21

# Creating a User Account for Creating Dashboards

To create a dashboard that customers can view, a best practice is to create a user account specifically for creating dashboards. Make this user account a member of all organizations so that the dashboard is viewable to customers from all organizations when it is shared. In general, use this separate user account instead of your own user account to ensure that no other entities, such as device groups or IT services, are inadvertently shared.

To create the dashboard user account:

1. Go to the **User Accounts** page (Registry > Accounts > User Accounts).
2. Click the **[Create]** button. The **Create New Account** page appears.

The screenshot shows the 'Create New Account' form with the following fields and values:

- Identification:**
  - First Name: Dashboard
  - Last Name: Administrator
  - Account Login Name: dashboard\_admin
  - Primary Email: (empty)
  - Password: (masked with dots)
  - Confirm Password: (masked with dots)
  - Password Strength: [Good]
  - Password Expiration: [Disabled]
  - Password Shadowing: [Default - cannot reuse passwords from past ye]
  - Require Password Reset:  Next Login
- Individual Properties:**
  - Organization: [System]
  - Account Type: [Individual]
  - Login State: [Active]
  - Authentication Method: [EM7 Session]
  - Restrict to IP: (empty)
  - Country: [United States]
  - Time Zone: [[\_ UTC]
  - Autocomplete Time Zone With Local settings: [Let The User Choose]
- Policy Membership:**
  - Account Templates: User: EM7 Administrator, User: End User, User: Executive, User: Operations Manager, User: Operator, User: Provisioning & Device Configuration, User: Report & Widget Developer

3. On the **Create New Account** page, complete the following fields:
  - **First Name.** Type a first name for this account, such as "Dashboard".
  - **Last Name.** Type a last name for this account, such as "Administrator".
  - **Account Login Name.** Type the user name you will type at login, such as "dashboard\_admin".
  - **Password.** Type a password for the user account.
  - **Confirm Password.** Type the password again.
  - **Require Password Reset.** Uncheck this checkbox.
  - **Organization.** Select System from the drop-down list.

- **Account Type.** In the two drop-down lists, select *Individual* and *User*.
  - Use the default settings in the remaining fields.
4. Click the **[Save]** button to create the new user account. The **Account Permissions** page for the new user account appears.

The screenshot shows the 'Account Permissions' configuration page for a new user account. The page is titled 'Account Permissions | For Account [ Dashboard Administrator ] | Account Successfully Created | Please Assign Permissions'. It features a blue header with 'Guide' and 'Refresh' buttons. The main content is divided into three columns:

- Left Column:** Contains fields for 'Account Login Name' (dashboard\_admin), 'Change Password' and 'Confirm Password' (empty), 'Password Strength' (Good), 'Account Type' (Individual), 'Login State' (Active), 'Password Expiration' (Disabled), 'Password Shadowing' (Default - cannot reuse passwords from past year), 'Require Password Reset' (Next Login), 'Authentication Method' (EM7 Session), and 'Restrict to IP' (empty). Below these is a 'Ticket Queue Memberships' list with options like Asset Management, Change Management, Documentation, etc.
- Middle Column:** Contains 'Primary Organization' (System), 'Theme' (ScienceLogic: White + Blue Titlebars), 'Time Zone' ([ \_ UTC]), 'Autosync Time Zone With Local settings' ([ Let The User Choose]), and 'Additional Organization Memberships' (All organizations).
- Right Column:** Contains 'Privilege Keys' with a list of checkboxes for various permissions such as 'EM7 System Administration', 'Grant All', 'Basic User Privileges', 'PowerPack Administration', 'Provisioning Access', 'Admin Portal UI Access', 'Subscription Management', 'Ticketing', 'Dashboards', 'Asset Management', 'Knowledge Base', and 'Organizations'. The checkbox for '[13] Dashboard - Administration' is checked.

A 'Save' button is located at the bottom center of the page.

5. Under **Additional Organization Memberships**, select *(All organizations)*. The *(All organizations)* option allows organizations that are added at a later date to access the dashboards that this user creates.
6. Under **Privilege Keys**, select the checkbox for the default *Dashboard - Administration* access key.
7. Click the **[Save]** button.

## Creating an Access Key to Control Dashboard Access

To restrict access to the dashboard, you can create an access key that a user must be granted to view the dashboard. This access key will not contain any access hooks.

To create an access key:

1. Go to the **Access Keys** page (System > Manage > Access Keys).
2. Click the **[Key Manager]** button. The **Key/Hook Alignment Editor** page appears.

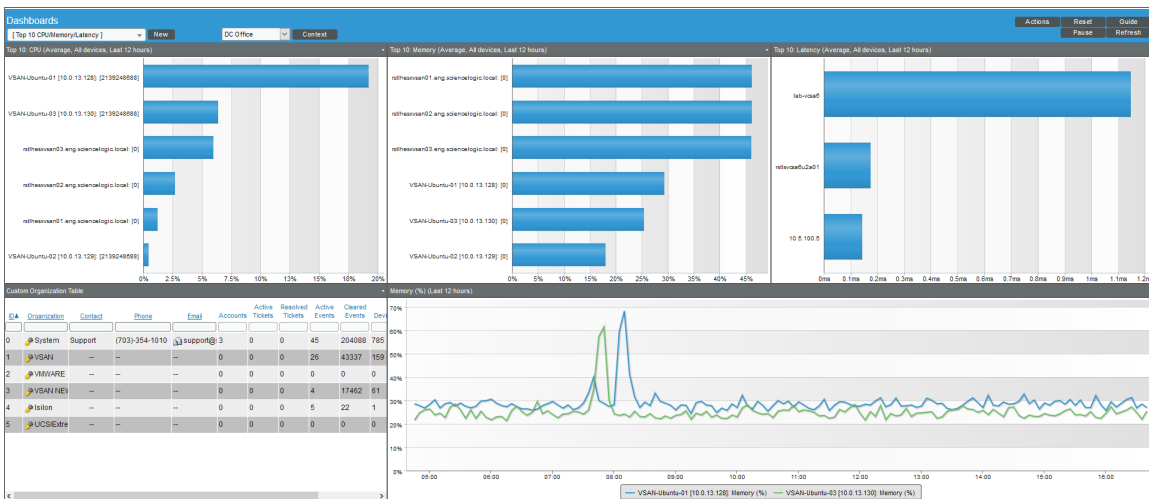

The screenshot shows the 'Key/Hook Alignment Editor' interface. The title bar reads 'Key/Hook Alignment Editor | Editing new key' with buttons for 'New', 'Report', and 'Reset'. On the left is a sidebar for 'Access Keys' with a tree view. The main area is split into 'Key Details' and 'Hook Alignment'. 'Key Details' includes a 'Name' field with 'Monitoring Service Dashboards', a 'Key Category' dropdown set to 'Dashboards', and a 'Key Description' text area containing 'This key is used to grant customers access to shared dashboards.'. 'Hook Alignment' has two columns: 'Unaligned Access Hooks' and 'Aligned Access Hooks'. The 'Unaligned' list includes 'Asset Management' (with sub-items: Asset:Add, Asset:Edit, Asset:Remove, Asset:View, Registry>Assets>Manager) and 'Business Services' (with sub-items: Product Catalog:Add/Rem, Product Catalog:Edit, Product Catalog:View, Product Catalog:View From Org Page, Registry>Business Services>Bandwidth Billing, Registry>Business Services>Distribution Lists, Registry>Business Services>Product Catalog, Registry>Business Services>Service Catalog, Registry>Business Services>Service Notifier). There are right and left arrow buttons between the columns. A 'Find' button is at the bottom left and a 'Save' button is at the bottom right.

3. On the **Key/Hook Alignment Editor** page, click the **[New]** button.
4. Complete the following fields:
  - **Name**. Type a name for this access key, such as "Monitoring Service Dashboards".
  - **Key Category**. Select *Dashboards* from the drop-down list.
  - **Key Description**. Type a description of this key, such as "This key is used to grant customers access to shared dashboards."
5. Click the **[Save]** button to save the access key.

**NOTE:** You can grant the new access key to only the customers that you want to have access to your dashboard.

# Creating a Dashboard that Enforces Organization Restrictions

This example describes how to create the following dashboard, which can be shared with multiple users:

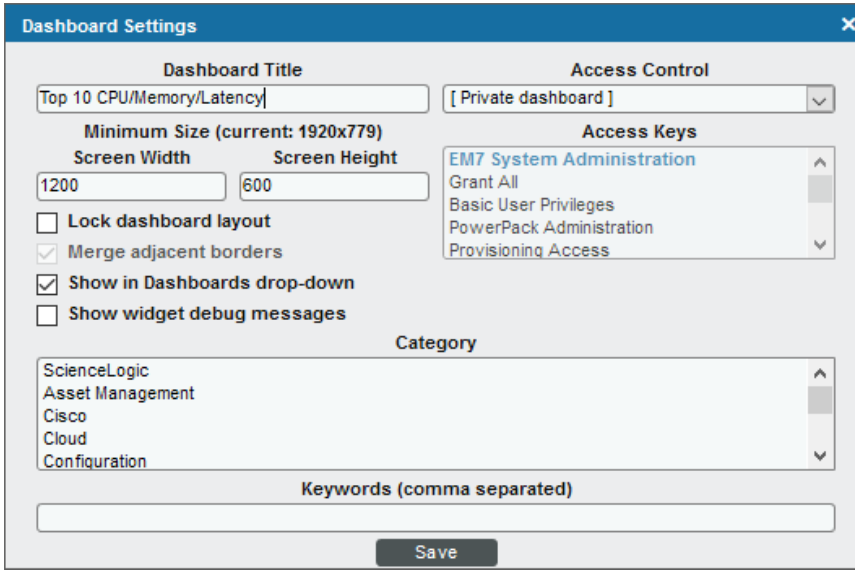

The dashboard contains:

- Three instances of the Leaderboard/Top-N widget across the top of the dashboard. These three widgets display the following bar graphs:
  - The 10 devices with the highest CPU utilization. By default, this widget displays the top 10 devices system-wide.
  - The 10 devices in the system with the highest memory utilization. By default, this widget displays the top 10 devices system-wide.
  - The 10 devices in the system with the highest latency. By default, this widget displays the top 10 devices system-wide.
- An instance of the Custom Table widget at the bottom-left of the dashboard. This widget is configured to display only organizations to which the user viewing the dashboard belongs. The user viewing the dashboard can select one or more organizations in this widget. When a user selects one or more organizations, the three Leaderboard/Top-N widgets update to display the top 10 devices from the selected organizations.
- An instance of the Multi-series Performance widget at the bottom-right of the dashboard. This widget is configured to read and display up to eight device performance metrics that are set in the context. The user viewing the dashboard can select the performance metrics in this widget by selecting one or more bars in the Leaderboard/Top-N base widgets.

## Creating and Configuring the Dashboard

To create and configure the basic settings for the shared dashboard:

1. Go to the **Classic Dashboards** page (Dashboards > Classic Dashboards).
2. In the top left of the **Dashboards** page, click the **[New]** button. A blank dashboard is created with a default name.
3. Click the **[Actions]** menu, and then click *Configure Dashboard*. The **Dashboard Settings** page appears:

The screenshot shows the "Dashboard Settings" dialog box with the following fields and options:

- Dashboard Title:** Text input field containing "Top 10 CPU/Memory/Latency".
- Access Control:** Dropdown menu showing "[ Private dashboard ]".
- Minimum Size (current: 1920x779):** Sub-section with:
  - Screen Width:** Text input field containing "1200".
  - Screen Height:** Text input field containing "600".
- Access Keys:** List box containing "EM7 System Administration", "Grant All", "Basic User Privileges", "PowerPack Administration", and "Provisioning Access".
- Lock dashboard layout:**  checkbox.
- Merge adjacent borders:**  checkbox.
- Show in Dashboards drop-down:**  checkbox.
- Show widget debug messages:**  checkbox.
- Category:** List box containing "ScienceLogic", "Asset Management", "Cisco", "Cloud", and "Configuration".
- Keywords (comma separated):** Empty text input field.
- Save:** Button at the bottom center.

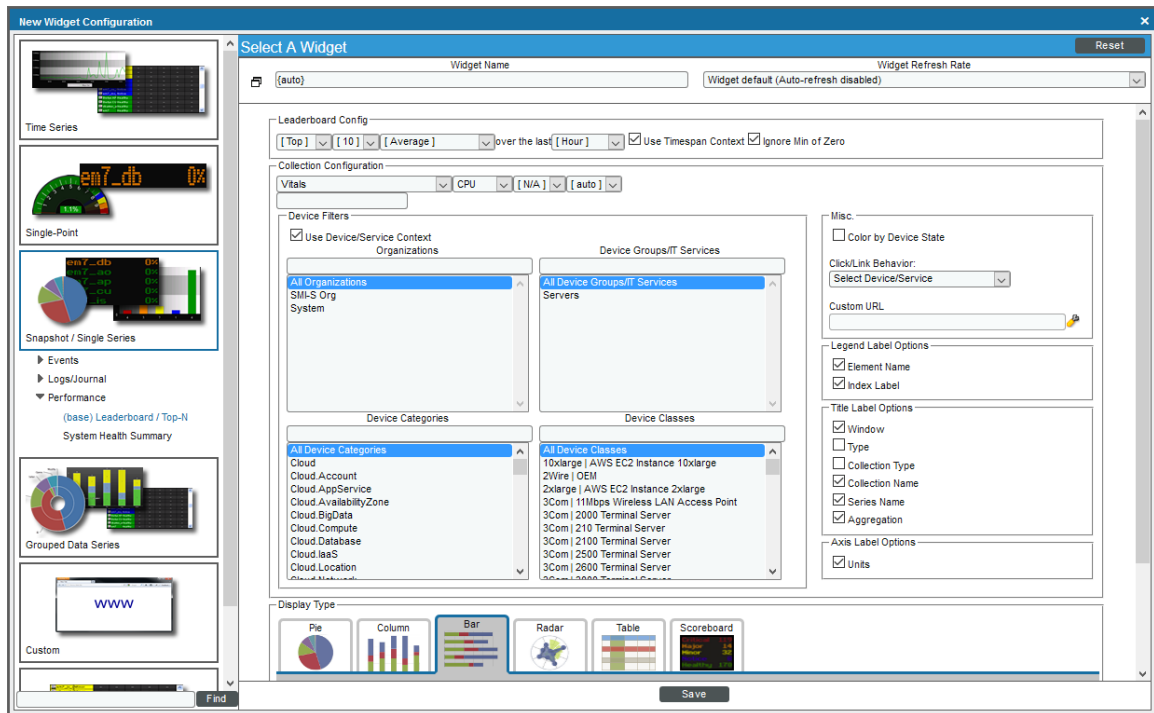

4. Type a name for the dashboard in the **Dashboard Title** field. This example uses "Top 10 CPU/Memory/Latency" as the name of the dashboard.
5. For this example, you can leave the remaining fields set to their default value.
6. Click the **[Save]** button to save the new name for the dashboard and close the **Dashboard Settings** page.

## Adding and Configuring the Leaderboard/Top-N Widgets

To add the three Leaderboard/Top-N widgets to the dashboard:

1. Click and hold in the top-left corner of the dashboard, then drag the widget that appears so that it is half the height and one-third of the width of the dashboard. When you release the mouse button, the **New Widget Configuration** page appears.

2. In the left NavBar, click the **[Snapshot/Single Series]** button. Expand the **Performance** category and select **(base) Leaderboard / Top-N**.

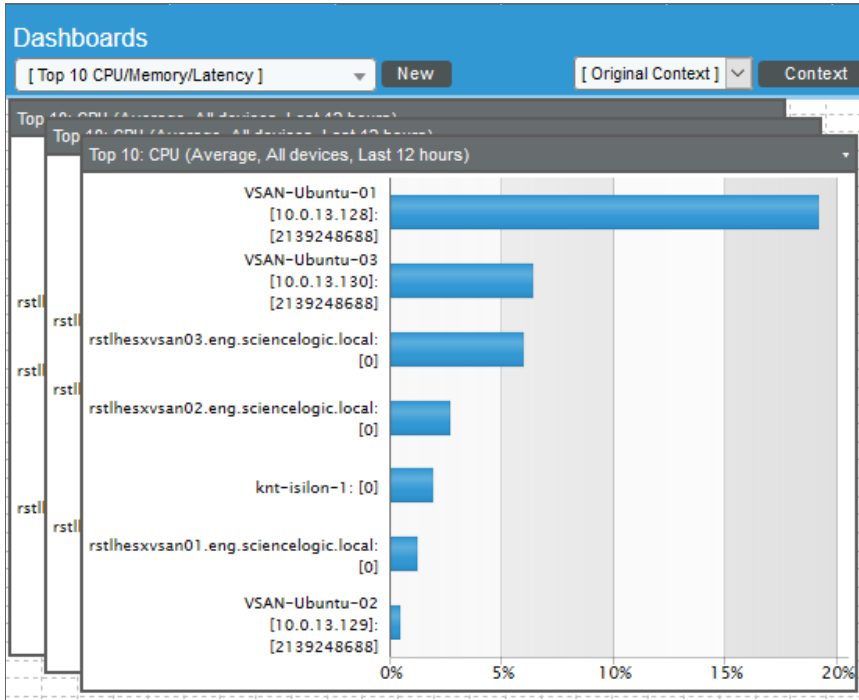

**TIP:** If your SL1 system contains a large number of widgets and you need to filter the results in the left NavBar, type "Leaderboard" in the field at the bottom of the NavBar and click the **[Find]** button.

3. Supply values in the following fields:
  - **Widget Name.** Leave "{auto}" in this field. SL1 automatically generates a title for the widget based on what is currently being displayed in the widget.
  - In the first field under **Collection Configuration**, select *Vitals*.
  - In the second field under **Collection Configuration**, select *CPU*. The dashboard will display the devices with the highest CPU Utilization.

- **Use Device/Service Context.** Select this checkbox. If you select this checkbox and other widgets on the dashboard define which devices should be displayed on the dashboard, this widget will evaluate only those selected devices when determining the devices with the highest CPU utilization. In this example, the Custom Table widget will define which devices should be displayed by allowing the user to select one or more organizations; when one or more organizations are selected, this widget will display only devices in those organizations.
  - **Click/Link Behavior.** Select *Select Device/Service*. When you select a value in this field, you are defining what will happen when a user clicks on the widget. When *Select Device/Service* is selected and a user clicks on a value in the widget, the widget defines the performance metric that will be displayed in the other widgets in the dashboard. In this example, the Multi-series Performance widget is configured to display the selected performance metric.
  - **Display Type.** Select *Bar* to make the widget display a horizontal bar graph.
  - For this example, you can leave the remaining fields set to their default value.
4. Click the **[Save]** button and close the **New Widget Configuration** page. The widget displays a bar graph that includes the 10 devices in the system with the highest CPU utilization:

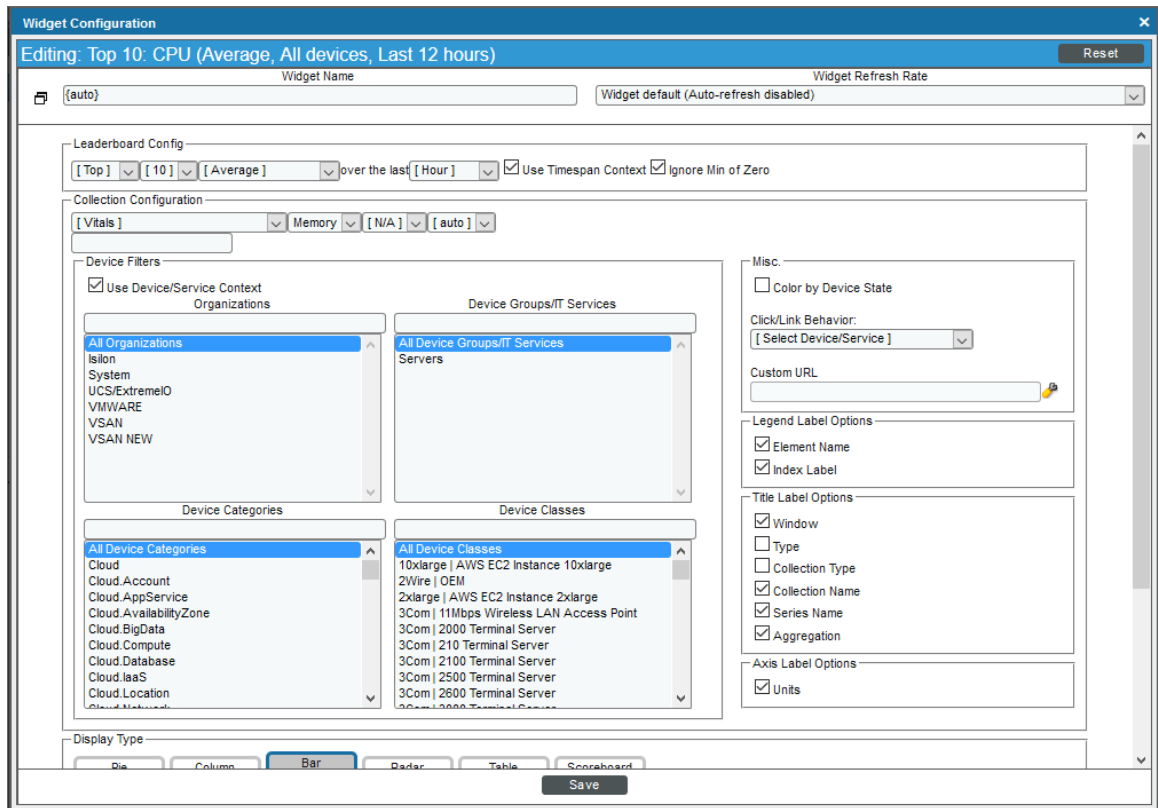

5. Instead of creating completely new widgets for the second and third Top 10 widgets, you can duplicate the first widget and then edit the appropriate settings. To duplicate the widget, click the **[Options]** menu in the top-right corner of the new widget and select *Duplicate*. Repeat this step to create a third instance of the widget. The dashboard now looks like this:

6. Click and hold the header bar of one of the two duplicate widgets, then drag the widget to the upper-right corner of the dashboard.
7. Click and hold the header bar of the other duplicated widget, then drag the widget to the top-middle of the dashboard, between the two other widgets.
8. If necessary, resize the widgets by clicking, holding, and dragging the edges of each widget. The dashboard should now look like this:

9. To reconfigure the middle widget, click the **[Options]** menu in the top-right corner of the widget and select *Configure*. The **Widget Configuration** page appears:

10. In the first field under **Collection Configuration**, select *Vitals*.
11. In the second field under **Collection Configuration**, select *Memory*. The dashboard displays the devices with the highest Memory Utilization.

- Click the **[Save]** button to save the widget and close the **Widget Configuration** page. The widget displays a bar graph that includes the 10 devices in the system with the highest memory utilization:

- To reconfigure the last widget on the right of the dashboard, click the **[Options]** menu in the top-right corner of the widget and select *Configure*. The **Widget Configuration** page appears:

**Editing: Top 10: Latency (Average, All devices, Last 12 hours)** [Reset]

Widget Name: [auto] | Widget Refresh Rate: Widget default (Auto-refresh disabled)

**Leaderboard Config**  
 [Top] [10] [Average] over the last [Hour]  Use Timespan Context  Ignore Min of Zero

**Collection Configuration**  
 [Availability] [Latency] [NA] [auto]

**Device Filters**  
 Use Device/Service Context

**Organizations**  
 All Organizations, Isilon, System, UCS/ExtremeID, VMWARE, VSAN, VSAN NEW

**Device Groups/IT Services**  
 All Device Groups/IT Services, Servers

**Device Categories**  
 All Device Categories, Cloud, Cloud.Account, Cloud.AppService, Cloud.AvailabilityZone, Cloud.BigData, Cloud.Compute, Cloud.Database, Cloud.IaaS, Cloud.Location

**Device Classes**  
 All Device Classes, 10xlarge | AWS EC2 Instance 10xlarge, 2Wire | OEM, 2xlarge | AWS EC2 Instance 2xlarge, 3Com | 11Mbps Wireless LAN Access Point, 3Com | 2000 Terminal Server, 3Com | 210 Terminal Server, 3Com | 2100 Terminal Server, 3Com | 2500 Terminal Server, 3Com | 2600 Terminal Server

**Misc.**  
 Color by Device State  
 Click/Link Behavior: [Select Device/Service]  
 Custom URL: [ ]

**Legend Label Options**  
 Element Name  
 Index Label

**Title Label Options**  
 Window  
 Type  
 Collection Type  
 Collection Name  
 Series Name  
 Aggregation

**Axis Label Options**  
 Units

**Display Type**  
 Pie | Column | **Bar** | Radar | Table | Scoreboard

[Save]

14. In the first field under **Collection Configuration**, select *Availability*.
15. In the second field under **Collection Configuration**, select *Latency*. The dashboard displays the devices with the highest Memory Utilization.
16. Click the **[Save]** button to save the widget and close the **Widget Configuration** page. The widget displays a bar graph that includes the 10 devices in the system with the highest latency:

## Adding and Configuring the Custom Table Widget

To add the Custom Table Widget to the dashboard:

1. Click and hold at the left of the dashboard, under the Top 10: CPU widget, then drag the widget that appears so that it is the same width as the Top 10: CPU widget. When you release the mouse button, the **New Widget Configuration** page appears.
2. In the left NavBar, click the **[Custom Table]** button. Expand the **Summary** category and select **(base) Custom Table**.

**TIP:** If your SL1 system contains a large number of widgets and you need to filter the results in the left NavBar, type "Custom Table" in the field at the bottom of the NavBar and click the **[Find]** button.

The Widget Configuration pane for the widget appears:

3. Supply values in the following fields:

- **Entity Type.** Select *Organization*. This widget displays a list of all organizations for which the user is a member.
- **Drive Context.** Select this checkbox. This widget controls what is displayed in other widgets in the dashboard (the Leaderboard/Top-N widgets).
- For this example, you can leave the remaining fields set to their default value.

4. Click the **[Save]** button to save the widget and close the **New Widget Configuration** page. The widget displays a table that contains the organizations for which you are a member:

ID	Organization	Contact	Phone	Email	Accounts	Active Tickets	Resolved Tickets	Active Events
0	System	Support	(703)-354-1010	support@sciencelc	3	0	0	30
1	VSAN	--	--	--	0	0	0	26
2	VMWARE	--	--	--	0	0	0	0
3	VSAN NEW	--	--	--	0	0	0	64
4	Isilon	--	--	--	0	0	0	2
5	UCS/Extre	--	--	--	0	0	0	0

- To make the three Leaderboard/Top-N widgets display the Top 10 devices in a specific organization, select the name of that organization:

## Adding and Configuring the Multi-series Performance Widget

To add the Multi-series Performance Widget to the dashboard:

- Click and hold at the top-left corner of the empty space in the dashboard, then drag the widget that appears so that it fills the remaining space in the dashboard. When you release the mouse button, the **New Widget Configuration** page appears.
- In the left NavBar, click the **[Time Series ]** button. Expand the **Performance** category and select **(base) Multi-series Performance**.

**TIP:** If your SL1 system contains a large number of widgets and you need to filter the results in the left NavBar, type "Multi-series" in the field at the bottom of the NavBar and click the **[Find]** button.

The Widget Configuration pane for the widget appears:

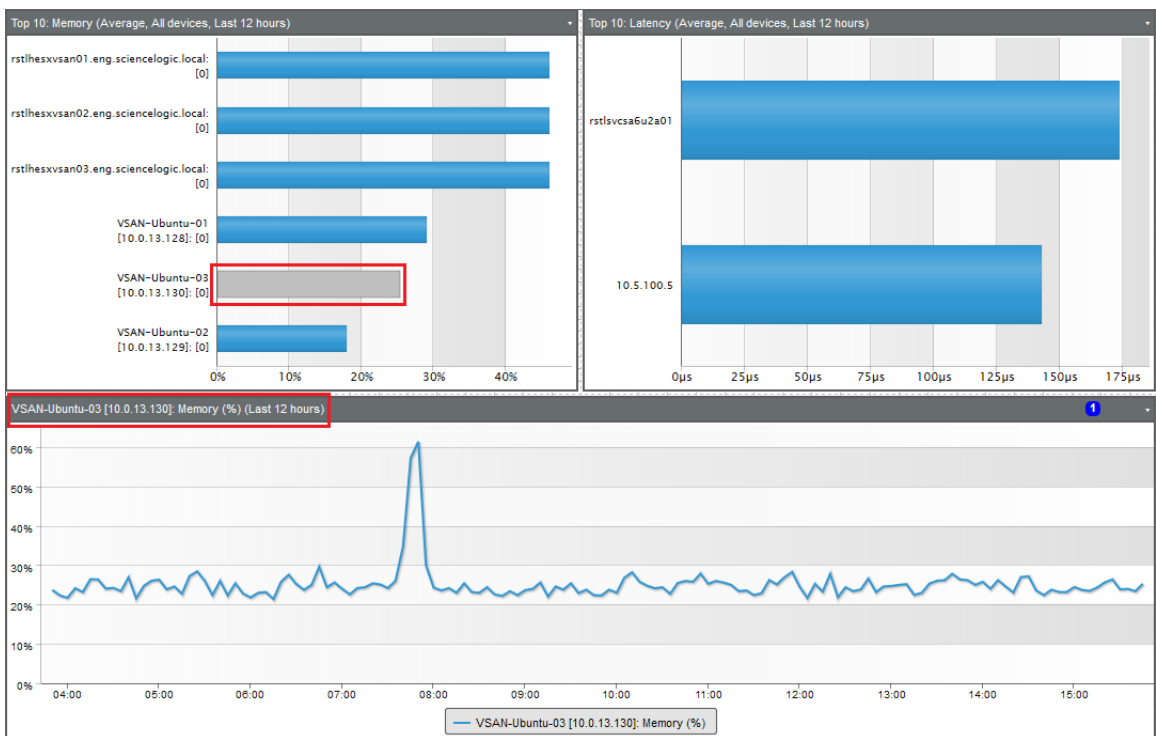

3. Supply values in the following fields:

- **Widget Name.** Leave "{auto}" in this field. SL1 automatically generates a title for the widget based on what is currently being displayed in the widget.
- **Type.** Select *Device*.
- **Series Selections.** In the **Element** field, select *Contextual Device 1*. Selecting this option tells the widget to display the performance metric that is selected in another widget in the dashboard. This widget can display up to eight performance metrics selected in other widgets at the same time. To configure the widget to display the maximum number of selected performance metrics, click **Add another series**, then select *Contextual Device 2* in the **Element** column. Repeat this step for *Contextual Device 3* through *Contextual Device 8*.
- **Display Type.** Select *Line*. The widget displays a line graph.
- For this example, you can leave the remaining fields set to their default value.

- Click the **[Save]** button to save the widget and close the **New Widget Configuration** page. The widget displays no time-series by default:

- To display a time-series in the Multi-series Performance widget, select one of the bars in one of the Leaderboard/Top-N widgets. After you select a bar, the bar turns gray, and the corresponding time series graph for that metric appears:

- To display multiple time-series, press the **Shift** key when you select the bars. To deselect all bars, select one of the currently selected bars again.

## Saving Context Selections in the Dashboard

In a dashboard that allows a user to select the elements that will be displayed in one or more widgets, you can save one or more sets of selections (the *context*). You can then load a set of selections using the **Context Selector** field to the left of the **[Context]** button.

For example, suppose that your system includes two organizations that include devices located at your DC office: "DC - Switches" and "DC - Servers". Suppose that you frequently select those two organizations in this example dashboard. Instead of selecting the two organizations in the custom table each time you open the dashboard, you can save your selections.

To save a set of context selections in the example dashboard:

1. Click the **[Context]** button and then select *Create*.
2. In the pop-up window that appears, type a name for the context and then click the **[Create]** button. This name immediately appears in the **Context Selector** field. In this example, the context is called "DC Office".
3. Select one or more organizations in the custom table widget. The selections you make will be re-loaded when you select this set of context selections. In this example, the "DC - Switches" and "DC - Servers" organizations are selected in the custom table.
4. To save your set of context selections, click the **[Context]** button and then select *Save*. Your selections are saved in the context that is displayed in the **Context Selector** field.
5. When you open this dashboard again, you can re-load the selections by choosing "DC Office" in the **Context Selector** field:

Sets of context selections are saved on a per-user basis. When you create a set of context selections, that set is viewable only to you. If you share your dashboard, other users can save their own sets of context selections, and you will not be able to view those saved contexts.

---

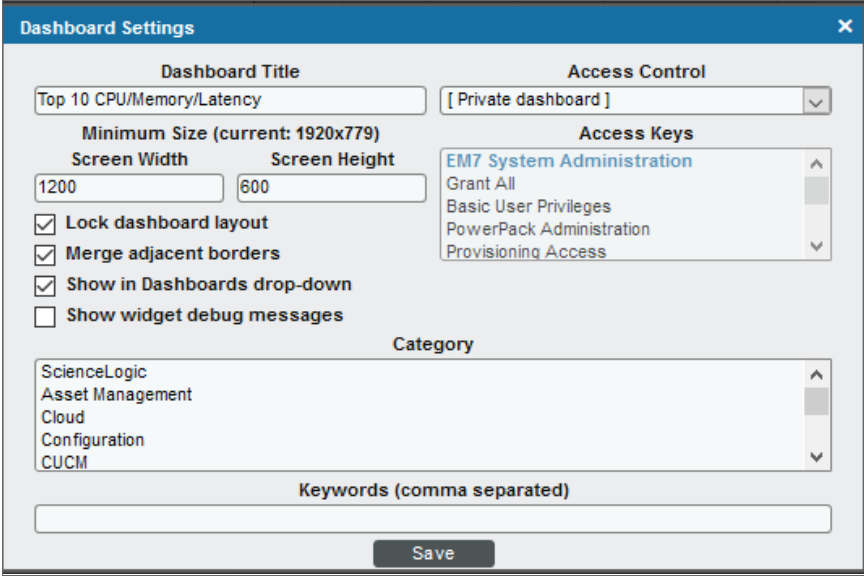

## Locking and Sharing the Dashboard

On the **Dashboard Settings** page, you can lock the layout of your dashboard, which will prevent users from moving or accidentally editing the widgets. You can also use the **Dashboard Settings** page to configure your dashboard to be shared between organizations.

## Locking the Dashboard

To lock the dashboard:

1. Select the dashboard you want to lock from the drop-down list in the top left of the **Dashboards tab** page.
2. In the **[Actions]** menu, select *Configure Dashboard...* The **Dashboard Settings** page appears.

The screenshot shows the 'Dashboard Settings' dialog box with the following fields and options:

- Dashboard Title:** Top 10 CPU/Memory/Latency
- Access Control:** [ Private dashboard ]
- Minimum Size (current: 1920x779):**
  - Screen Width:** 1200
  - Screen Height:** 600
- Access Keys:** EM7 System Administration, Grant All, Basic User Privileges, PowerPack Administration, Provisioning Access
- Checkboxes:**
  - Lock dashboard layout
  - Merge adjacent borders
  - Show in Dashboards drop-down
  - Show widget debug messages
- Category:** ScienceLogic, Asset Management, Cloud, Configuration, CUCM
- Keywords (comma separated):** (empty text box)
- Save** button

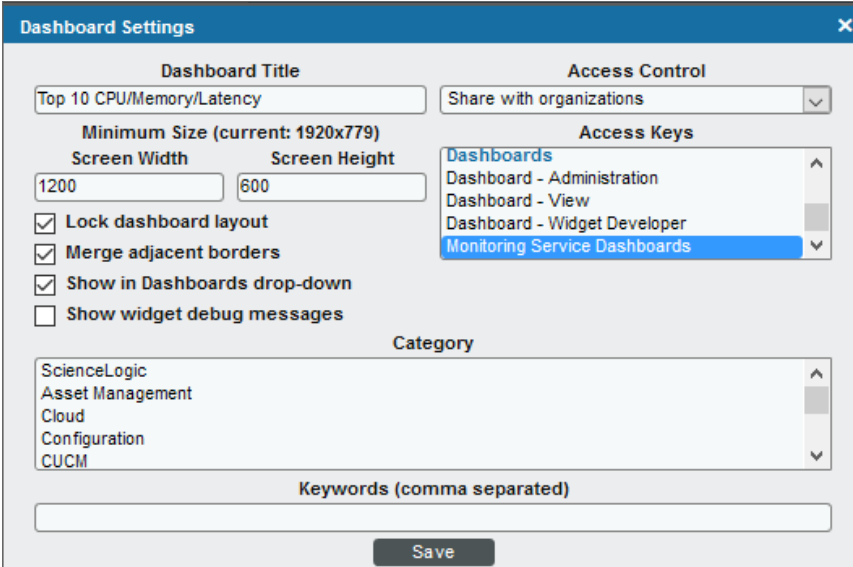

3. Select the **Lock dashboard layout** checkbox. Selecting this checkbox makes the **Merge adjacent borders** checkbox available. As a best practice, leave the **Merge adjacent borders** checkbox selected to make the dashboard look more unified.
4. Click the **[Save]** button to lock the dashboard.

## Sharing the Dashboard

To share the dashboard:

1. Select the dashboard you want to share from the drop-down list in the top left of the **Dashboards tab** page.

- In the **[Actions]** menu, select *Configure Dashboard*. The **Dashboard Settings** page appears.

The screenshot shows the "Dashboard Settings" dialog box with the following configuration:

- Dashboard Title:** Top 10 CPU/Memory/Latency
- Access Control:** Share with organizations
- Minimum Size (current: 1920x779):**
  - Screen Width: 1200
  - Screen Height: 600
- Access Keys:** Monitoring Service Dashboards
- Category:** ScienceLogic
- Keywords (comma separated):** (empty field)
- Checkboxes:**
  - Lock dashboard layout
  - Merge adjacent borders
  - Show in Dashboards drop-down
  - Show widget debug messages
- Buttons:** Save

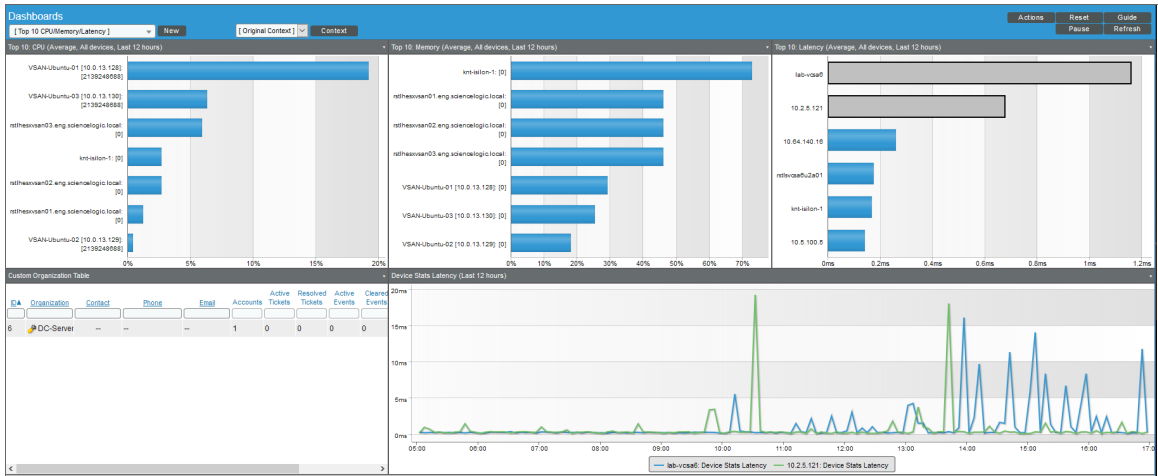

- In the **Access Control** field, select *Share with organizations*.
- In the **Access Keys** field, select the *Monitoring Service Dashboards* key that you created in the [Creating an Access Key to Control Dashboard Access](#) section.
- Click the **[Save]** button. This dashboard can now be viewed by all organizations to which you have granted your access key.

---

## Example Dashboard View

To illustrate how a user views this dashboard, we created a user account that is part of the organization "DC - Servers". The user, "Samuel Johnson", was created with the default *End User* user policy. We added the [Monitoring Service Dashboards](#) access key to this policy to allow the user to view the example dashboard.

When user Samuel Johnson logs in to the system and selects the **Top 10 CPU/Memory/Latency** dashboard, this is what he sees:

# Chapter

# 2

## Creating Reports for Users

---

### Overview

This chapter describes how an administrative user can create a report job for a specific customer and schedule that report job.

Use the following menu options to navigate the SL1 user interface:

- To view a pop-out list of menu options, click the menu icon ()
- To view a page containing all of the menu options, click the Advanced menu icon ()

This chapter includes the following topics:

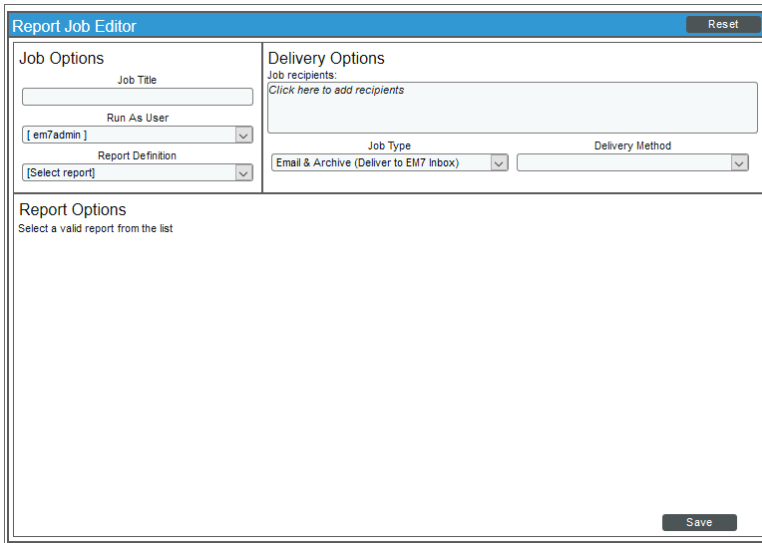

<i>Creating a Report Job</i> .....	24
<i>Scheduling a Report Job</i> .....	25

---

## Creating a Report Job

To create a report job for a customer:

1. Go to the **Report Jobs** page (Reports > Create Report > Report Jobs).
2. Click the **[Create]** button in the upper right of the page. The **Report Job Editor** page appears:

The screenshot shows the 'Report Job Editor' form. It has a blue header bar with the title 'Report Job Editor' and a 'Reset' button. The form is divided into three main sections: 'Job Options', 'Delivery Options', and 'Report Options'.  
- **Job Options:** Contains a text field for 'Job Title', a dropdown for 'Run As User' (currently showing '[em7admin]'), and a dropdown for 'Report Definition' (currently showing '[Select report]').  
- **Delivery Options:** Contains a text field for 'Job recipients' with a link 'Click here to add recipients', a dropdown for 'Job Type' (currently showing 'Email & Archive (Deliver to EM7 Inbox)'), and a dropdown for 'Delivery Method'.  
- **Report Options:** Contains a large text area with the instruction 'Select a valid report from the list'.  
A 'Save' button is located at the bottom right of the form.

3. On the **Report Job Editor** page, complete the following fields as needed:
  - **Job Title.** Type the name of the report job, up to 220 characters in length.
  - **Run As User.** Specify a user for which the report will run. When SL1 generates the report, SL1 uses this user's organization restrictions. This is helpful when a system administrator sets up a scheduled report for a user who does not have access to the Report Scheduler and who may have access only to the entities in his or her organization. As a result, select the user account for the customer for which you are generating the report.
  - **Report Definition.** Select a report from the list of all reports defined on the **Report Management** page. Depending on the report you selected, SL1 populates the various fields in the **Delivery Options** and **Report Options** sections.
  - **Job Recipients.** Specifies the recipients for the report. Clicking in this field opens the **Add Recipients** page, where you can select users, external contacts, and vendor contacts to include in the **Job Recipients** field.
  - **Job Type.** Select how to deliver the generated report. Your options include:
    - *Email & Archive.* SL1 emails the report to the people listed in the **Job recipients** field, and the email is also archived in SL1.

- *Archive*. The report is archived in SL1. You can view archived reports on the **Scheduled Report Archive** page (Reports > Create Report > Scheduled Job / Report Archive).
- **Delivery Method**. Select a method of delivery and the output format (if applicable) for the report. Your options include:
  - *Inline (HTML)*. SL1 sends the generated report to the selected users in the body of an email.
  - *Attachment*. SL1 sends the generated report to the selected users as an attachment to an email.
  - *Link to EM7*. SL1 makes the generated report available with a direct URL. The link can be sent to the selected users in an email.
- **Report Options**. The interface for the selected report appears in this pane. Select the options you want included in the automatically generated report.

4. To save the report job you created, click the **[Save]** button in the bottom right of the page.

## Scheduling a Report Job

After you create a report job, you can schedule that report to run once, at a specified time, or at specified regular intervals.

To schedule a report job:

1. Go to the **Schedule Manager** page (Reports > Create Report > Scheduler).

The screenshot shows the 'Schedule Manager' interface with a table of scheduled reports. The table has the following columns: Schedule Summary, Schedule Description, Event ID, sch. id, Content, Timezone, Start Time, Duration, Recurrence Interval, End Date, Last Run, Owner, Organization, Visibility, and Enabled. There are four rows of data:

Schedule Summary	Schedule Description	Event ID	sch. id	Content	Timezone	Start Time	Duration	Recurrence Interval	End Date	Last Run	Owner	Organization	Visibility	Enabled
Annual Report	Annual performance report	3	1	Reports	America/New_York	2017-05-23 11:45:00	5 minute(s)	Every 12 Months	2017-05-23 11:48:09	--	em7admin	System	World	Yes
Daily Report	Daily performance report	2	1	Reports	America/New_York	2017-05-23 11:45:00	5 minute(s)	Every 24 Hours	2017-05-23 11:48:09	--	em7admin	System	World	Yes
Hourly Report	Hourly performance report	4	1	Reports	America/New_York	2017-05-23 11:45:00	5 minute(s)	Every 1 Hour	2017-05-23 11:48:09	--	em7admin	System	World	Yes
Monthly Report	Monthly performance report	1	1	Reports	America/New_York	2017-05-23 11:45:00	5 minute(s)	Every 1 Month	2017-05-23 11:48:09	2017-05-23 11:45:00	em7admin	System	World	Yes

At the bottom right of the table, there is a '[Select Action]' dropdown menu and a 'Go' button.

2. Click the **[Create]** button in the upper right of the page. The **Schedule Editor** page appears:

The screenshot shows the 'Schedule Editor | Creating New schedule' interface. It features a blue header with a 'Reset' button. The form is divided into three main sections: 'Basic Settings', 'Time Settings', and 'Action Settings'. In the 'Basic Settings' section, 'Schedule Name' is empty, 'Schedule Type' is 'Reports', 'Visibility' is '[ World ]', 'Organization' is '[ System ]', and 'Owner' is '[ em7admin ]'. There is also a 'Description' field. The 'Time Settings' section includes 'Start Time' (format: YYYY-MM-DD HH:MM:SS), 'Time Zone' (set to '[ America/New\_' ), and 'Recurrence' (set to 'None'). The 'Action Settings' section has a 'Report Job' dropdown menu. A 'Save' button is located at the bottom center of the form.

3. On the **Schedule Editor** page, complete the following fields as needed:

### **Basic Settings**

- **Schedule Name.** Type a name for the scheduled process.
- **Schedule Type.** Indicates the scheduled process type (such as Tickets, Reports, or Devices).
- **Visibility.** Select the visibility for the scheduled process. You can select one of the following:
  - *Private.* The scheduled process is visible only to the owner selected in the **Owner** field.
  - *Organization.* The scheduled process is visible only to the organization selected in the **Organization** field.
  - *World.* The scheduled process is visible to all users.
- **Organization.** Select the organization to which you want to assign the scheduled process.
- **Owner.** Select the owner of the scheduled process. The default value is the username of the user who created the scheduled process.
- **Description.** Type a description of the scheduled process.

### **Time Settings**

- **Start Time.** Click in the field and select the date and time you want the scheduled process to start.
- **Time Zone.** Select the region or time zone for the scheduled start time.

**NOTE:** If you want SL1 to automatically adjust for daylight savings time (if applicable), then you must select a named region (such as *America/New York*) in the **Time Zone** field. If you select a specific time zone (such as *EST*) or a specific time offset (such as *GMT-5*), then SL1 will not automatically adjust for daylight savings time.

- **Recurrence.** Select whether you want the scheduled process to occur once or on a recurring basis. You can select one of the following:
  - *None.* The scheduled process occurs only once.
  - *By Interval.* The scheduled process recurs at a specific interval.

If you select *By Interval*, the following additional fields appear:

- **Interval.** In the first field, enter a number representing the frequency of the scheduled process, then select the time interval in the second field. Choices are *Minutes*, *Hours*, *Days*, *Weeks*, or *Months*. For example:
  - If you specify "6 Hours", then the scheduled process recurs every six hours from the time listed in the **Start Date** field.
  - If you specify "10 Days", then the scheduled process recurs every 10 days from the date listed in the **Start Date** field.
  - If you specify "2 Weeks", then the scheduled process recurs every two weeks, on the same day of the week as the **Start Date**.
  - If you specify "3 Months" the ticket recurs every three months, on the same day of the month as the **Start Date**.
- **Recur Until.** Specifies when the scheduled process stops recurring. You can select one of the following:
  - *No Limit.* The scheduled process recurs indefinitely until it is disabled.
  - *Specified Date.* The scheduled process recurs until a specific date and time. If you select *Specified Date*, you must enter a date and time in the **Last Recurrence** field.
- **Last Recurrence.** Click in the field and select the date and time you want the scheduled process to stop recurring.

### **Action Settings**

- **Report Job.** Select the report job to generate the report.

4. Click **[Save]**.
