Before You Install or Upgrade

Ensure that you are running version 10.2.0 or later of SL1 before installing *AWS Extended Services* version 100.

NOTE: For details on upgrading SL1, see the appropriate [Release Notes](#).

If your SL1 system is not currently running version 10.2.0 or later, you must upgrade to 10.2.0 or later as part of the upgrade process for version 100 of the PowerPack.

Ensure that you have installed the latest version of the *Amazon Web Services PowerPack*.

Additionally, the Data Collectors used to monitor the AWS account must be running the Oracle Linux 7.2 operating system.

Installing the PowerPack

To install version 100 of the *AWS Extended Services PowerPack*, perform the following steps:

To install this PowerPack:

1. Familiarize yourself with the [Known Issues](#) for this release.
2. See the [Before You Install or Upgrade](#) section. If you have not done so already, upgrade your system to the 10.2.0 or later release.
3. Download the *AWS Extended Services* version 100 PowerPack from the Support Site to a local computer.

4. Go to the **PowerPack Manager** page (System > Manage > PowerPacks). Click the **[Actions]** menu and choose *Import PowerPack*. When prompted, import *AWS Extended Services* version 100.
5. Click the **[Install]** button. For details on installing PowerPacks, see the chapter on *Installing a PowerPack* in the **PowerPacks** manual.

For more information about using the PowerPack, see the **Monitoring Amazon Web Services** manual.

Known Issues and Workarounds

The following known issues affect version 100 of the *AWS Extended Services PowerPack*:

- To prevent the discovery of DocDB and Neptune databases inside regional RDS services, which will not collect data or align Dynamic Applications, do not enable new permissions for services in this PowerPack before installing version 123 of the *Amazon Web Services PowerPack*.
- The "AWS: Connect Performance" Dynamic Applications does not collect any metrics in version 100. Data collection for the collection objects will be implemented in the next release.
- The "AWS: Athena Workgroup Performance" Dynamic Application collects data only for the "Processed Bytes - Sum" collection object. Collection for the remainder of the collection objects will be implemented in the next release.
