

Cisco: ACI Multi-Site Manager PowerPack Release Notes

Version 101

Overview

Version 101 of the *Cisco: ACI Multi-Site Manager PowerPack* includes security updates and updates to Dynamic Applications and content libraries.

- **Minimum Required Platform Version:** 10.1.0

This document includes the following topics:

<i>Before You Install</i>	2
<i>Installing the PowerPack</i>	2
<i>Features</i>	3
<i>Enhancements and Issues Addressed</i>	3
<i>Known Issues</i>	3

Before You Install

Ensure that you are running version 10.1.0 or later of SL1 before installing *Cisco: ACI Multi-Site Manager* version 101.

NOTE: For details on upgrading SL1, see the appropriate [Release Notes](#).

Installing the PowerPack

TIP: By default, installing a new version of a PowerPack will overwrite all content in that PowerPack that has already been installed on the target system. You can use the **Enable Selective PowerPack Field Protection** setting in the **Behavior Settings** page (System > Settings > Behavior) to prevent the new version of the PowerPack from overwriting local changes for some commonly customized fields.

NOTE: If you are currently using the Dynamic Applications in this PowerPack to monitor devices, collection errors might occur for one or two polling cycles during the installation of a new version. To prevent collection errors during an upgrade, you can optionally disable collection for monitored devices before performing the following steps and re-enable collection after the upgrade.

To install version 101 of the *Cisco: ACI Multi-Site Manager PowerPack*, perform the following steps:

1. Familiarize yourself with the [Known Issues](#) for this release.
2. See the [Before You Install or Upgrade](#) section. If you have not done so already, upgrade your system to the 10.1.0 or later release.
3. Download *Cisco: ACI Multi-Site Manager* version 101 from the Support Site to a local computer.
4. Go to the **PowerPack Manager** page (System > Manage > PowerPacks). Click the Actions menu and choose *Import PowerPack*. When prompted, import *Cisco: ACI Multi-Site Manager* version 101.
5. Click the Install button. For details on installing PowerPacks, see the chapter on *Installing a PowerPack* in the **PowerPacks** manual.

Features

Version 101 of the *Cisco: ACI Multi-Site Manager* PowerPack includes the following features:

- Dynamic Applications that discover and collect data from ACI Multi-Site Manager devices
- Event Policies and corresponding alerts that are triggered when ACI Multi-Site Manager devices meet certain status criteria
- Device Classes for each type of ACI Multi-Site Manager device monitored
- A sample credential for discovering ACI Multi-Site Manager devices

Enhancements and Issues Addressed

The following enhancements and addressed issues are included in version 101 of the *Cisco: ACI Multi-Site Manager* PowerPack:

- All Dynamic Applications in the PowerPack were updated to have the **Collector Affinity** field set to *Root device collector* by default.
- Snippet logging in the PowerPack's Dynamic Applications was updated to ensure that usernames, passwords, API keys, or authorization tokens are hidden.
- An issue was addressed in the "Cisco: ACI Multi-Site Manager Site Performance" and the "Cisco: ACI Multi-Site Manager Site Configuration" Dynamic Applications in which snippets were not collecting values properly.
- The "silo_apps" content library was added to the PowerPack, and the "silo_core_Rest" and "silo_core" content libraries were updated.

Known Issues

The following known issues affect version 101 of the *Cisco: ACI Multi-Site Manager* PowerPack:

- After upgrading the PowerPack, the "Cisco: ACI Multi-Site Manager Token" Dynamic Application will need to be manually aligned to the virtual device.
