

Cisco: CUCM Cisco Unified Communications Manager PowerPack Release Notes

Version 116

Overview

Version 116 of the "Cisco: CUCM Cisco Unified Communications Manager" PowerPack addresses an issue that caused the "Cisco: CUCM Cluster Root Cache" Dynamic Application to fail with an HTTP 599 error.

- **Minimum Required Skylar One (SL1) Version:** 12.3.1

This document covers the following topics:

Before You Install or Upgrade	2
Installing the PowerPack	2
Upgrading the PowerPack	3
Features	3
Enhancements and Addressed Issues	4
Known Issues	4

Before You Install or Upgrade

Ensure that you are running version 12.3.1 or later of Skylar One before installing the "Cisco: CUCM Cisco Unified Communications Manager" PowerPack.

NOTE: For details on upgrading Skylar One, see the relevant [Skylar One Platform Release Notes](#).

Installing the PowerPack

To install version 116 of the "Cisco: CUCM Cisco Unified Communications Manager" PowerPack, perform the following steps:

To install this PowerPack:

1. Familiarize yourself with the [Known Issues](#) for this release.
2. See the [Before You Install or Upgrade](#) section. If you have not done so already, upgrade your system to the 12.3.1 or later release.
3. Download the "Cisco: CUCM Cisco Unified Communications Manager" PowerPack version 116 from the Support Center to a local computer.
4. Go to the **PowerPack Manager** page (System > Manage > PowerPacks). Click the **[Actions]** menu and choose *Import PowerPack*. When prompted, import Cisco: CUCM Cisco Unified Communications Manager version 116.
5. Click the **[Install]** button. For details on installing PowerPacks, see the chapter on *Installing a PowerPack* in the **PowerPacks** manual.

For more information about using the PowerPack, see the [Monitoring Windows Systems with PowerShell](#) manual.

Upgrading the PowerPack

TIP: By default, installing a new version of a PowerPack will overwrite all content in that PowerPack that has already been installed on the target system. You can use the **Enable Selective PowerPack Field Protection** setting in the **Behavior Settings** page (System > Settings > Behavior) to prevent the new version of the PowerPack from overwriting local changes for some commonly customized fields.

To upgrade from a previous version of the PowerPack, perform the following steps:

To install this PowerPack:

1. Familiarize yourself with the [Known Issues](#) for this release.
2. See the [Before You Install or Upgrade](#) section. If you have not done so already, upgrade your system to the 12.3.1 or later release.
3. Download the "Cisco: CUCM Cisco Unified Communications Manager" PowerPack version 116 from the Support Center to a local computer.
4. Go to the **PowerPack Manager** page (System > Manage > PowerPacks). Click the **[Actions]** menu and choose *Import PowerPack*. When prompted, import Cisco: CUCM Cisco Unified Communications Manager version 116.
5. Click the **[Install]** button. For details on installing PowerPacks, see the chapter on *Installing a PowerPack* in the **PowerPacks** manual.

For more information about using the PowerPack, see the [Monitoring Windows Systems with PowerShell](#) manual.

Features

This release includes the following features:

- Dynamic Applications that discover and collect data from all CUCM devices and their children
- Events that address all actions and statuses on CUCM devices
- Device Classes for all types of CUCM devices
- Device Dashboards for all types of CUCM devices
- A sample Basic/Snippet credential for discovering CUCM devices
- A Run Book Action that assigns the CUCM Cluster root device to the "UC.Cluster" Device Class

Enhancements and Addressed Issues

The following enhancements and addressed issues are included in this release:

- Addressed an issue that caused the "Cisco: CUCM Cluster Root Cache" Dynamic Application to fail with an HTTP 599 error. (Case: 00650218)

Known Issues

The following known issues affect version 116 of the "Cisco: CUCM Cisco Unified Communications Manager" PowerPack:

- Support for making API calls to all CUCM nodes should improve issues previously experienced with the CUCM Tomcat service. If you still experience issues, perform the previous workarounds of restarting the Tomcat service on the CUCM Publisher, and disabling unneeded CUCM dynamic applications to reduce the number of incoming requests.
- If you attempt to discover a CUCM cluster whose servers have been cloned from a separate CUCM cluster that has also been discovered within the same Skylar One stack, the "Cisco: CUCM Subscriber Merge" Dynamic Application may incorrectly attempt to merge subscriber devices with components in another DCM tree. To avoid this, you must manually merge the subscriber server devices with their associated component devices in the correct cluster.

NOTE: The physical device of the CUCM Publisher should <i>not</i> be merged with its associated component device.
