

Cisco: TelePresence: Endpoint PowerPack Release Notes

Version 102

Overview

Version 102 of the "Cisco: Telepresence: Endpoints" PowerPack updates the PowerPack for Python 3.11 compatibility.

- **Minimum Required SL1 Version:** 12.3.1

This document covers the following topics:

<i>Before You Install or Upgrade</i>	2
<i>Installing or Upgrading the PowerPack</i>	2
<i>Included Features</i>	3
<i>Enhancements and Issues Addressed</i>	3
<i>Known Issues</i>	3

Before You Install or Upgrade

Ensure that you are running version 12.3.1 or later of SL1 before installing the "Cisco: Telepresence: Endpoints" PowerPack.

NOTE: For details on upgrading SL1, see the relevant [SL1 Platform Release Notes](#).

Installing or Upgrading the PowerPack

TIP: By default, installing a new version of a PowerPack will overwrite all content in that PowerPack that has already been installed on the target system. You can use the **Enable Selective PowerPack Field Protection** setting in the **Behavior Settings** page (System > Settings > Behavior) to prevent the new version of the PowerPack from overwriting local changes for some commonly customized fields.

NOTE: If you are currently using the Dynamic Applications in this PowerPack to monitor devices, collection errors might occur for one or two polling cycles during the installation of a new version. To prevent collection errors during an upgrade, you can optionally disable collection for monitored devices before performing the following steps and re-enable collection after the upgrade.

To install this PowerPack:

1. Search for and download the PowerPack from the **PowerPacks** page (Product Downloads > PowerPacks & SyncPacks) at the [ScienceLogic Support Site](#).
2. In SL1, go to the **PowerPacks** page (System > Manage > PowerPacks).
3. Click the **Actions** menu and choose *Import PowerPack*. The **Import PowerPack** modal appears.
4. Click **[Browse]** and navigate to the PowerPack file from step 1.
5. Select the PowerPack file and click **[Import]**. The **PowerPack Installer** modal displays a list of the PowerPack contents.
6. Click **[Install]**. The PowerPack is added to the **PowerPack Manager** page.

Included Features

This release includes the following features:

- Dynamic Applications that enable SL1 to discover, model, and monitor Cisco TelePresence endpoints
- Device Classes for each type of Cisco TelePresence endpoint monitored
- Event Policies and the corresponding alerts that are triggered when Cisco TelePresence endpoints meet certain status criteria.

Enhancements and Issues Addressed

The following enhancements and addressed issues are included in this release:

- Updated the **Collector Affinity** to *Root device collector* for all Dynamic Applications.
- Updated the PowerPack for Python 3.11 compatibility.

Known Issues

This release has no known issues.
