## Overview

Version 107 of the *Cisco: Video Endpoint PowerPack* includes a security update.

- **Minimum Required Platform Version:** 10.1.0

This document includes the following topics:

<i>Before You Install or Upgrade</i> .....	3
<i>Installing or Upgrading to Cisco: Video Endpoint PowerPack version 107</i> .....	3
<i>Features</i> .....	4
<i>Enhancements and Issues Addressed</i> .....	4
<i>Known Issues</i> .....	4

---

## Before You Install or Upgrade

Ensure that you are running version 10.1.0 or later of SL1 before installing *Cisco: Video Endpoint* version 107.

**NOTE:** For details on upgrading SL1, see the appropriate [Release Notes](#).

---

## Installing or Upgrading to Cisco: Video Endpoint PowerPack version 107

To install or upgrade the *Cisco: Video Endpoint PowerPack*, perform the following steps:

1. Familiarize yourself with the **Known Issues** for this release.
2. See the **Before You Install or Upgrade** section. If you have not done so already, upgrade your system to the 10.1.0 or later release.
3. Download *Cisco: Video Endpoint* version 107 from the Support Site to a local computer.
4. Go to the **PowerPack Manager** page (System > Manage > PowerPacks). Click the Actions menu and choose *Import PowerPack*. When prompted, import *Cisco: Video Endpoint* version 107.
5. Click the Install button. For details on installing PowerPacks, see the chapter on *Installing a PowerPack* in the **PowerPacks** manual.

For more information about using the PowerPack, see the **Monitoring Video Devices** manual.

**TIP:** By default, installing a new version of a PowerPack will overwrite all content in that PowerPack that has already been installed on the target system. You can use the **Enable Selective PowerPack Field Protection** setting in the **Behavior Settings** page (System > Settings > Behavior) to prevent the new version of the PowerPack from overwriting local changes for some commonly customized fields.

**NOTE:** If you are currently using the Dynamic Applications in the *Cisco: Video Endpoint* PowerPack to monitor devices, collection errors might occur for one or two polling cycles during the installation of a new version. To prevent collection errors during an upgrade, you can optionally disable collection for monitored devices before performing the following steps and re-enable collection after the upgrade.

---

## Features

Version 107 of the *Cisco: Video Endpoint* PowerPack includes the following features:

- Dynamic Applications that enable the ScienceLogic platform to discover, model, and monitor Cisco video endpoints
- Event Policies that are triggered when Cisco video endpoint component devices meet certain status criteria
- Device Classes for each type of Cisco video endpoint component device monitored
- Sample credentials for discovering Cisco video endpoint component devices
- A device template for manually aligning Dynamic Applications to Cisco video endpoint devices

---

## Enhancements and Issues Addressed

The following enhancements and addressed issues are included in version 107 of the *Cisco: Video Endpoint* PowerPack:

- Snippet logging was updated in the following Dynamic Applications to ensure that usernames, passwords, API keys, or authorization tokens are hidden:
  - Cisco: Call Detail Records (Tandberg C Series)
  - Cisco: Call Detail Records (Tandberg MXP)

---

## Known Issues

The following known issues affect version 107 of the *Cisco: Video Endpoint* PowerPack:

- The "Cisco: Audio/Video (Tandberg C Series)" Dynamic Application may not collect HDMI input/output or DVI settings from Tandberg C Series devices with older firmware versions.

- If you are editing an alert in the "Cisco: Configuration (Tandberg C Series)" Dynamic Application, when you click Save, you may see warning messages that include, "uses collection objects from a different group than the current alert formula." The indexes between these groups are the same, so this alert can be ignored.
- If the alert object "Cisco (Tandberg C Series) System name has now been set" in the "Cisco: Configuration (Tandberg C Series)" Dynamic Application contains a single quotation, it will cause a syntax error.
- If you are on SL1 version 8.7.0, alerts may not be triggered due to an issue in which the message "Aborting: required objects did not collect" appears and the alerting evaluation phase ends. This issue has been fixed for versions 8.8.0 and later.
- The "Cisco: Device Discovery (CE Series)" Dynamic Application will not be immediately executed when it is aligned by the "Cisco: Video Endpoint Application Management (CE Series)" run book action. The correct device class will not be assigned to non-SNMP devices until the next time the Dynamic Application polls the device, 24 hours later.
