## Overview

Version 101 of the *Dell EMC: Isilon PowerPack* adds the ability to discover and monitor Isilon nodes, includes new events and alerts, and introduces support for SSL certificates.

- **Minimum Required Platform Version:** 8.2.0
- **Support Status:** GA

This document describes:

- [Pre-installation or pre-upgrade information](#)
- [The installation and upgrade process for the PowerPack](#)
- [The features included in version 101](#)
- [The enhancements and issues addressed in version 101](#)

---

## Before You Install or Upgrade

Ensure that you are running version 8.2.0 or later of SL1 before installing the *Dell EMC: Isilon PowerPack* version 101.

**NOTE:** For details on upgrading the ScienceLogic platform, see the appropriate ScienceLogic Release Notes.

---

## Installing or Upgrading to Dell EMC: Isilon PowerPack version 101

To install the *Dell EMC: Isilon PowerPack* for the first time or to upgrade from a previous version, perform the following steps:

**TIP:** By default, installing a new version of a PowerPack will overwrite all content in that PowerPack that has already been installed on the target system. You can use the **Enable Selective PowerPack Field Protection** setting in the **Behavior Settings** page (System > Settings > Behavior) to prevent local changes for some commonly customized fields from being overwritten.

**NOTE:** If you are currently using the Dynamic Applications in the *Dell EMC: Isilon PowerPack* to monitor devices, collection errors might occur for one or two polling cycles during the installation of a new version. To prevent collection errors during an upgrade, you can optionally disable collection for monitored devices before performing the following steps and re-enable collection after the upgrade.

1. See the [Before You Install](#) section. If you have not done so already, upgrade your system to the 8.2.0 or later release.
2. Download version 101 of the *Dell EMC: Isilon* PowerPack from the Support Site to a local computer.
3. Go to the **PowerPack Manager** page (System > Manage > PowerPacks). Click the **[Actions]** menu and choose *Import PowerPack*. When prompted, import version 101 of the PowerPack.
4. After importing the PowerPack, you will be prompted to install the PowerPack. Click the **Install** button to install the PowerPack.

---

## Features

*Dell EMC: Isilon* PowerPack version 101 includes the following features:

- Dynamic Applications to discover, model, and monitor performance metrics and collect configuration data for Dell EMC Isilon devices
- Device Classes for each type of Isilon device monitored
- Example credentials that you can use as templates to create a SOAP/XML credential for connecting to Isilon devices and an SNMP credential for device class alignment

**NOTE:** For discovery, you must create an SNMP credential and a SOAP/XML credential and then select both for the discovery session.

---

## Enhancements and Issues Addressed

The following changes are included in version 101 of the *Dell EMC: Isilon* PowerPack:

- The following Dynamic Applications were added to the PowerPack to discover and monitor Isilon nodes:
  - Dell EMC: Isilon Node Capacity Stats
  - Dell EMC: Isilon Node Discovery
  - Dell EMC: Isilon Node Disk Config
  - Dell EMC: Isilon Node Hardware Config
  - Dell EMC: Isilon Node Hardware Performance
  - Dell EMC: Isilon Node Stats
- Support for Secure Sockets Layer (SSL) certificates was added to the PowerPack. SSL certificate verification is handled through the SOAP/XML credential that enables SL1 to connect to Isilon devices. The following conditions apply:
  - If the SOAP/XML credential's **Embed Value [%1]** field value is "True", SL1 uses SSL certificate verification for discovery.

- If the credential's **Embed Value [%1]** field value is "False" or blank, SL1 does not use SSL certificate verification for discovery.
- If the credential's **Embed Value [%1]** field value is "True" but no certs.crt file exists, SL1 generates a "NoSSLCertFile" error.

The SSL certificate can be added and maintained in the following directory:

```
/var/lib/em7/content/silo_core_rest/certs.crt
```

**NOTE:** For more information, see the *Monitoring Dell EMC Isilon* manual.

- Collection labels were added for LUN and Storage Array presentation objects.
