- **Support Status:** GA

This document describes:

- The [installation and upgrade process](#)
- The [features](#) in version 105
- The [issues addressed](#) in version 105

---

## Installing or Upgrading to Host Resources Core Pack PowerPack version 105

**TIP:** By default, installing a new version of a PowerPack will overwrite all content in that PowerPack that has already been installed on the target system. You can use the **Enable Selective PowerPack Field Protection** setting in the **Behavior Settings** page (System > Settings > Behavior) to prevent the new version of the PowerPack from overwriting local changes for some commonly customized fields.

**NOTE:** If you are currently using the Dynamic Applications in the Host Resources Core Pack PowerPack to monitor devices, collection errors might occur for one or two polling cycles during the installation of a new version. To prevent collection errors during an upgrade, you can optionally disable collection for monitored devices before performing the following steps and re-enable collection after the upgrade.

To install the *Host Resources Core Pack* PowerPack for the first time or to upgrade from a previous version, perform the following steps:

1. If you have not done so already, upgrade your system to the 8.7.0 or later release.
2. Go to the Customer Portal and download version 105 of the *Host Resources Core Pack* to a local computer.
3. Go to the **PowerPack Manager** page (System > Manage > PowerPacks). Click the Actions menu and choose *Import PowerPack*. Import the Host Resources Core Pack PowerPack version 105. For details on importing PowerPacks, see the chapter on *Installing a PowerPack* in the **PowerPacks** manual.
4. Click the Install button. For details on installing PowerPacks, see the chapter on *Installing a PowerPack* in the **PowerPacks** manual.

---

## Features

*Host Resources Core Pack* version 105 includes the following features:

- Dynamic Applications that collect configuration information from the HOST-RESOURCE-MIB and monitor Host Resources CPU, memory performance, software inventory, and file systems.
- Events and corresponding alerts that are triggered when specific criteria are met.

---

## Enhancements and Issues Addressed

The following enhancements and addressed issues are included in version 105 of the Host Resources Core Pack PowerPack:

- The "Host Resource: Storage" and "Host Resource: Configuration" Dynamic Applications were updated to address an issue where requesting results for too many OIDs resulted in "tooBig" and some timeout errors.
- Addressed an alert issue with Juniper devices where alerts were triggered on device filesystems.
