# IBM: AIX Monitoring PowerPack Release Notes

Version 101

---

## Overview

Version 101 of the *IBM: AIX Monitoring* PowerPack includes updates to Dynamic Applications, Device Classes, Event Policies, and Run Book Actions for monitoring AIX devices.

- **Minimum Required SL1 Version:** 11.3.1

This document covers the following topics:

|                                                                                    |   |

---

## Before You Install or Upgrade

Ensure that you are running version 11.3.1 or later of SL1 before installing "IBM: AIX Monitoring" PowerPack version 101.

**NOTE:** For details on upgrading SL1, see the relevant [SL1 Platform Release Notes](#).

---

## Installation and Upgrade Process from PowerPack Version 0.6

**NOTE:** You can upgrade to version 100 of this PowerPack from version 0.6 of the *SLCOE: AIX Base Pack*PowerPack. If you are upgrading from that version, you will need to disable all events and alerts from the previous before installing and using this PowerPack to ensure that duplicate events do not occur.

**TIP:** By default, installing a new version of a PowerPack will overwrite all content in that PowerPack that has already been installed on the target system. You can use the **Enable Selective PowerPack Field Protection** setting in the **Behavior Settings** page (System > Settings > Behavior) to prevent the new version of the PowerPack from overwriting local changes for some commonly customized fields.

**NOTE:** If you are currently using the Dynamic Applications in this PowerPack to monitor devices, collection errors might occur for one or two polling cycles during the installation of a new version. To prevent collection errors during an upgrade, you can optionally disable collection for monitored devices before performing the following steps and re-enable collection after the upgrade.

To install this PowerPack:

1. Familiarize yourself with the [Known Issues](#) for this release.
2. See the [Before You Install or Upgrade](#) section. If you have not done so already, upgrade your system to the 10.2 or later release.
3. Download the "IBM: AIX Monitoring" version 101 PowerPack from the Support Site to a local computer.
4. Go to the **PowerPack Manager** page (System > Manage > PowerPacks). Click the **[Actions]** menu and choose *Import PowerPack*. When prompted, import "IBM: AIX Monitoring" version 101.
5. Click the **[Install]** button. For details on installing PowerPacks, see the chapter on *Installing a PowerPack* in the **PowerPacks** manual.

After upgrading the PowerPack from version 0.6, perform the following steps if you did **not** enable the **Enable Selective PowerPack Field Protection** setting:

1. After running discovery, manually align the "IBM: AIX ICDA Cache" Dynamic Application to your AIX device.
2. Un-align the "IBM: AIX CPU Utilization (mpstat)" Dynamic Application from your AIX device.

If you did enable the **Enable Selective PowerPack Field Protection** setting, perform the following steps after upgrading:

1. Required: After running discovery, manually align the "IBM: AIX ICDA Cache" Dynamic Application to your AIX device and enable it.
2. Optional: Manually disable and un-align the "IBM: AIX CPU Utilization (mpstat)" Dynamic Application from your AIX devices to avoid multiple events related to CPU coming from the "IBM: AIX LPAR CPU Stats" Dynamic Application.
3. Optional: Enable alerts related to Virtual Memory Utilization metrics in the "IBM: AIX Memory Stats" Dynamic Application.
4. Optional: Enable the **Summarization State** for presentation objects in all AIX Dynamic Applications.

**NOTE:** After the upgrade the default AIX credential is overwritten. Ensure that the correct values are entered in the credential.

---

# Installation and Upgrade Process from PowerPack Version 0.7 and Later

**NOTE:** You can upgrade to version 101 of this PowerPack from version 0.7 of the *SLCOE: AIX Base PackPowerPack*. If you are upgrading from that version, you will need to disable all events and alerts from the previous before installing and using this PowerPack to ensure that duplicate events do not occur.

**TIP:** By default, installing a new version of a PowerPack will overwrite all content in that PowerPack that has already been installed on the target system. You can use the **Enable Selective PowerPack Field Protection** setting in the **Behavior Settings** page (System > Settings > Behavior) to prevent the new version of the PowerPack from overwriting local changes for some commonly customized fields.

**NOTE:** If you are currently using the Dynamic Applications in this PowerPack to monitor devices, collection errors might occur for one or two polling cycles during the installation of a new version. To prevent collection errors during an upgrade, you can optionally disable collection for monitored devices before performing the following steps and re-enable collection after the upgrade.

To install this PowerPack:

1. Search for and download the PowerPack from the **PowerPacks** page (Product Downloads > PowerPacks & SyncPacks) at the [ScienceLogic Support Site](#).
2. In SL1, go to the **PowerPacks** page (System > Manage > PowerPacks).
3. Click the **Actions** menu and choose *Import PowerPack*. The **Import PowerPack** modal appears.
4. Click **[Browse]** and navigate to the PowerPack file from step 1.
5. Select the PowerPack file and click **[Import]**. The **PowerPack Installer** modal displays a list of the PowerPack contents.
6. Click **[Install]**. The PowerPack is added to the **PowerPack Manager** page.

---

## Features

This release includes the following features:

- Dynamic Applications that discover and collect configuration and performance data for AIX devices
- Event Policies and corresponding alerts that are triggered when AIX devices meet certain status criteria
- Device Classes for each type of AIX device monitored
- A Device Template for aligning Dynamic Applications

- A Run Book Action and an Automation policy to assign the proper device classes to AIX devices
- A Dashboard that displays information about your AIX server

---

## Enhancements and Issues Addressed

The following enhancements and addressed issues are included in version 101 of the "IBM: AIX Monitoring" PowerPack:

- Updated the collection objects in the "IBM: AIX ICDA Cache" and "IBM:AIX Inodes" Dynamic Applications wherever "df" commands are present, to use a Perl script that times out after 3 seconds by default. This update will prevent filesystem discovery delays and high CPU load.
- Updated the "IBM: AIX Error Report" Dynamic Application to use the "silo\_ssh" and "silo\_ssh\_requests" libraries.
- Added a new template, "IBM: VIOS Dynamic Applications Template" to the "IBM: VIOS Device Class Configuration" Dynamic Application and its corresponding device classes.
- Added Filesystem type to the "IBM: AIX IC Filesystem Inventory" Dynamic Application.
- Added sudo to the "IBM: AIX CPU Utilization (sar)" and "IBM: AIX Total Allocated Storage Value (Bootinfo)" Dynamic Applications.
- Updated the following ICDA Dynamic Applications from the "IBM: AIX Monitoring" PowerPack:
  - IBM: AIX IC Details
  - IBM: AIX IC Filesystem Inventory
  - IBM: AIX IC Filesystem Performance
  - IBM: AIX IC Process Inventory
  - IBM: AIX IC Process Performance
  - IBM: AIX ICDA Cache
- Updated the following configuration and performance Dynamic Applications from the "IBM: AIX Monitoring" PowerPack to be compatible with Python 3:
  - IBM: AIX CPU Utilization (mpstat)
  - IBM: AIX CPU Utilization (sar)
  - IBM: AIX Device Class Configuration
  - IBM: AIX Disks
  - IBM: AIX Error Report
  - IBM: AIX Filesystem
  - IBM: AIX Inodes
  - IBM: AIX LPAR CPU Stats
  - IBM: AIX LPAR CPU Configuration

- IBM: AIX Memory Stats
- IBM: AIX Network Stats
- IBM: AIX Page Space Read White
- IBM: AIX Path Status
- IBM: AIX Processor States
- IBM: AIX System Configuration
- IBM: AIX Total Allocated StorageValue (Bootinfo)
- IBM: AIX Uptime & Load Average
- IBM: AIX Volumes
- IBM: AIX Zombie Process Cont
