

Microsoft: Hyper-V PowerPack Release Notes

Version 102

Overview

Version 102 of the *Microsoft: Hyper-V PowerPack* updates the PowerPack to be Python 3-compatible and updates log messages in a Dynamic Application.

- **Minimum Required SL1 Version:** 12.1.0

Before You Install or Upgrade	2
Installing or Upgrading the PowerPack	2
Features	3
Enhancements and Addressed Issues	3
Known Issues	3

Before You Install or Upgrade

Ensure that you are running version 12.1.0 or later of SL1 before installing *Microsoft: Hyper-V* version 102.

NOTE: For details on upgrading SL1, see the appropriate [Release Notes](#).

Installing or Upgrading the PowerPack

TIP: By default, installing a new version of a PowerPack will overwrite all content in that PowerPack that has already been installed on the target system. You can use the **Enable Selective PowerPack Field Protection** setting in the **Behavior Settings** page (System > Settings > Behavior) to prevent the new version of the PowerPack from overwriting local changes for some commonly customized fields.

NOTE: If you are currently using the Dynamic Applications in this PowerPack to monitor devices, collection errors might occur for one or two polling cycles during the installation of a new version. To prevent collection errors during an upgrade, you can optionally disable collection for monitored devices before performing the following steps and re-enable collection after the upgrade.

To install this PowerPack:

1. Familiarize yourself with the [Known Issues](#) for this release.
2. See the [Before You Install or Upgrade](#) section. If you have not done so already, upgrade your system to the 12.1.0 or later release.
3. Download the "Microsoft: Hyper-V" version 102 PowerPack from the Support Site to a local computer.
4. Go to the **PowerPack Manager** page (System > Manage > PowerPacks). Click the **[Actions]** menu and choose *Import PowerPack*. When prompted, import "Microsoft: Hyper-V" version 102.
5. Click the **[Install]** button. For details on installing PowerPacks, see the chapter on *Installing a PowerPack* in the **PowerPacks** manual.

For more information about using this PowerPack, see the [Monitoring Windows Systems with PowerShell](#) manual.

Features

Version 102 of the *Microsoft: Hyper-V* PowerPack includes the following features:

- Dynamic Applications that collect Hyper-V performance data.
- Event Policies that are triggered when Hyper-V performance metrics meet certain status criteria.

Enhancements and Addressed Issues

The following enhancements and addressed issues are included in version 102 of the *Microsoft: Hyper-V* PowerPack:

- Updated the PowerPack to be Python 3-compatible.
- Added a label and updated the log messages for the alert and event messages in the "Microsoft: Hyper-V Logical Processor Performance" Dynamic Application.

Known Issues

Version 102 of the *Microsoft: Hyper-V* PowerPack has no known issues.
