

Microsoft: Hyper-V PowerPack Release Notes

Version 103

Overview

Version 103 of the "Microsoft: Hyper-V" PowerPack updates the PowerPack for Python 3.11 compatibility.

- **Minimum Required SL1 Version:** 12.3.1

<i>Before You Install or Upgrade</i>	2
<i>Installing or Upgrading the PowerPack</i>	2
<i>Features</i>	3
<i>Enhancements and Addressed Issues</i>	3
<i>Known Issues</i>	3

Before You Install or Upgrade

Ensure that you are running version 12.3.1 or later of SL1 before installing the "Microsoft: Hyper-V" PowerPack.

NOTE: For details on upgrading SL1, see the relevant [SL1 Platform Release Notes](#).

Installing or Upgrading the PowerPack

TIP: By default, installing a new version of a PowerPack will overwrite all content in that PowerPack that has already been installed on the target system. You can use the **Enable Selective PowerPack Field Protection** setting in the **Behavior Settings** page (System > Settings > Behavior) to prevent the new version of the PowerPack from overwriting local changes for some commonly customized fields.

NOTE: If you are currently using the Dynamic Applications in this PowerPack to monitor devices, collection errors might occur for one or two polling cycles during the installation of a new version. To prevent collection errors during an upgrade, you can optionally disable collection for monitored devices before performing the following steps and re-enable collection after the upgrade.

NOTE: If you are currently using the Dynamic Applications in this PowerPack to monitor devices, collection errors might occur for one or two polling cycles during the installation of a new version. To prevent collection errors during an upgrade, you can optionally disable collection for monitored devices before performing the following steps and re-enable collection after the upgrade.

To install this PowerPack:

1. Search for and download the PowerPack from the **PowerPacks** page (Product Downloads > PowerPacks & SyncPacks) at the [ScienceLogic Support Site](#).
2. In SL1, go to the **PowerPacks** page (System > Manage > PowerPacks).
3. Click the **Actions** menu and choose *Import PowerPack*. The **Import PowerPack** modal appears.
4. Click **[Browse]** and navigate to the PowerPack file from step 1.
5. Select the PowerPack file and click **[Import]**. The **PowerPack Installer** modal displays a list of the PowerPack contents.
6. Click **[Install]**. The PowerPack is added to the **PowerPack Manager** page.

For more information about using this PowerPack, see the *Monitoring Windows Systems with PowerShell* manual.

Features

This release includes the following features:

- Dynamic Applications that collect Hyper-V performance data.
- Event Policies that are triggered when Hyper-V performance metrics meet certain status criteria.

Enhancements and Addressed Issues

The following enhancements and addressed issues are included in this release:

- Updated the PowerPack for Python 3.11 compatibility.

Known Issues

This release has no known issues.
