# Oracle: Solaris Monitoring PowerPack Release Notes

Version 103

---

# Overview

Version 103 of the "Oracle: Solaris Monitoring" PowerPack updates the PowerPack and its Dynamic Applications to support Python 3.11. It also addresses several issues from previous releases.

- **Minimum Required Skylar One (SL1) Version:** 12.3.1

## Before You Install or Upgrade

Ensure that you are running version 12.3.1 or later of Skylar One before installing the "Oracle: Solaris Monitoring" PowerPack.

**NOTE:** For details on upgrading Skylar One, see the relevant [Skylar One Platform Release Notes](#).

---

## Installation and Upgrade Process

**NOTE:** If you are currently using the Dynamic Applications in this PowerPack to monitor devices, collection errors might occur for one or two polling cycles during the installation of a new version. To prevent collection errors during an upgrade, you can optionally disable collection for monitored devices before performing the following steps and re-enable collection after the upgrade.

To install this PowerPack:

1. Search for and download the PowerPack from the **PowerPacks** page at the [ScienceLogic Support Center](#) (Skylar One > PowerPacks).
2. In Skylar One (formerly SL1), go to the **PowerPacks** page (System > Manage > PowerPacks).
3. Click the **Actions** menu and choose *Import PowerPack*. The **Import PowerPack** modal appears.
4. Click **[Browse]** and navigate to the PowerPack file from step 1.
5. Select the PowerPack file and click **[Import]**. The **PowerPack Installer** modal displays a list of the PowerPack contents.
6. Click **[Install]**. The PowerPack is added to the **PowerPack Manager** page.

---

## Features

This release includes the following features:

- Dynamic Applications to collect configuration and performance data about Oracle Solaris systems
- Device classes for each of the Oracle devices monitored
- A device template for aligning Oracle Solaris Dynamic Applications
- A run book automation policy and action for classifying Oracle Solaris devices
- A sample credential for discovering Oracle Solaris devices
- Event policies and corresponding alerts that are triggered when Oracle Solaris devices meet certain status criteria

---

## Enhancements and Issues Addressed

The following enhancements and addressed issues are included in this release:

- Updated the PowerPack and all of its Dynamic Applications to support Python 3.11.
- Resolved an issue in the "Oracle: Solaris IC Filesystem Inventory" Dynamic Application, which was storing free disk space instead of total disk space. (Case: 00526698)
- Addressed an issue that prevented Solaris systems from reporting the correct uptime due to a unit mismatch between seconds and centi-seconds in the data collection process. (Case: 00519780)

---

## Known Issues

This release has no known issues.
