

SL1 PowerFlow powerflowcontrol (pfctl) Command-Line Utility

Release Notes Version 2.7.8

Overview

The SL1 PowerFlow **powerflowcontrol** (pfctl) command-line utility version 2.7.8 addressed a number of issues in the utility, including a complete update to the **collect_pf_logs** action, which is now called **logcollect**. This version of the utility is included with the PowerFlow Platform version 2.7.0 release.

For more information about the commands you can run using this utility, see [Using the powerflowcontrol \(pfctl\) Command-line Utility](#).

This document covers the following topics:

Issues Addressed	2
Known Issues	2
Installing the powerflowcontrol (pfctl) Command-Line Utility	3

Issues Addressed

The following issues were addressed in this release:

- For the **powerflowcontrol** (pfctl) command-line utility, renamed the existing **collect_pf_logs** action to **logcollect** and updated the entire functionality of the action. For more information, see the **logcollect** topic in the [Using the powerflowcontrol \(pfctl\) Command-line Utility](#) chapter in the *SL1 PowerFlow Platform* manual. (Case: 00317293)
- Added the pfctl node actions **check_redis_maxmemory** and **fix_redis_maxmemory** to verify the **MAXMEMORY** variable in the **docker-compose.yml** file. Before these updates, the PowerFlow Redis service expected a value of **MAXMEMORY** to be passed using Docker environment variables, but the override templates in the pfctl utility supplied **maxmemory** instead. The templates have been updated, and the new **check_redis_maxmemory** action determines if the Redis service requires an update to the environment variable, while the **fix_redis_maxmemory** action applies that change. The user will need to delete and recreate the Redis service after the fix action runs. In addition, the PowerFlow Redis image was updated to accept either **MAXMEMORY** or **maxmemory** as an environment variable. (Case: 00385354)
- Addressed an issue where the pfctl utility did not properly calculate Linux memory availability when running the **pfctl healthcheck** action. (Case: 00321182)

TIP: To view release notes and manuals for all versions of the SL1 PowerFlow Platform, see [SL1 PowerFlow Platform Documentation](#). To view release notes and manuals for PowerFlow SyncPacks, see [SL1 PowerFlow SyncPack Documentation](#).

Known Issues

This release contains the following known issue:

- If you get the "Error: No such option: --version Did you mean --json?" error message when running the `pfctl --version` command, you might have an older version of pfctl that was installed as a different user. To resolve this, be sure to install the powerflowcontrol (pfctl) utility version 2.7.7 as root with sudo, and remove any other versions installed by other users (isadmin or ec2-user):

```
su isadmin
```

```
pip3 uninstall -y iservicecontrol
```

Installing the powerflowcontrol (pfctl) Command-Line Utility

To locate and download the **powerflowcontrol** (pfctl) utility:

1. Go to the ScienceLogic Support site at <https://support.sciencelogic.com/s/>.
2. Click the **[Product Downloads]** tab and select *PowerFlow*. The **PowerFlow** page appears.
3. Click the link for the current release. The **Release Version** page appears.
4. In the **Release Files** section, click the link for the version of PowerFlow Control you want to download. The **Release File Details** page appears.
5. Click the **[Download File]** button to download the **.whl** file for the **powerflowcontrol** utility.
6. Using WinSCP or another file-transfer utility, copy the **.whl** file to a directory on the PowerFlow system.
7. Go to the console of the PowerFlow system or use SSH to access the PowerFlow system.
8. To install the utility, run the following command:

```
sudo pip3 install iservicecontrol-2.7.8-py3-none-any.whl
```

9. To check the version number of the utility, run the following command:

```
pip3 show iservicecontrol
```
