

Restorepoint PowerPack

Release Notes Version 103

Overview

Version 103 of the "Restorepoint" PowerPack addresses an issue in the SSH/Key credential.

This PowerPack works in conjunction with the "Restorepoint" SyncPack.

This document covers the following topics:

| | |
|---|---|
| System Requirements | 2 |
| Installing the PowerPack | 2 |
| Included Features | 3 |
| Enhancements and Issues Addressed | 3 |
| Known Issues | 3 |

System Requirements

The "Restorepoint" PowerPack requires:

- SL1 PowerFlow platform version 2.4.0 or later.
- SL1 version 11.2.0 or later. For details on upgrading SL1, see the relevant [SL1 Platform Release Notes](#).
- Restorepoint version 5.4 or later.

Installing the PowerPack

TIP: By default, installing a new version of a PowerPack will overwrite all content in that PowerPack that has already been installed on the target system. You can use the **Enable Selective PowerPack Field Protection** setting in the **Behavior Settings** page (System > Settings > Behavior) in SL1 to prevent the new version of the PowerPack from overwriting local changes for some commonly customized fields.

NOTE: If you are currently using the Dynamic Applications in the PowerPack to monitor devices, collection errors might occur for one or two polling cycles during the installation of a new version. To prevent collection errors during an upgrade, you can optionally disable collection for monitored devices before performing the following steps and re-enable collection after the upgrade.

To install this PowerPack:

1. Search for and download the PowerPack from the **PowerPacks** page on the [ScienceLogic Support Site](#).
2. In SL1, go to the **PowerPack Manager** page (System > Manage > PowerPacks).
3. Click the **Actions** menu and choose *Import PowerPack*. The **Import PowerPack** modal appears.
4. Click **[Browse]** and navigate to the PowerPack file from step 1.
5. Select the PowerPack file and click **[Import]**. The **PowerPack Installer** modal displays a list of the PowerPack contents.
6. Click **[Install]**. The PowerPack is added to the **PowerPack Manager** page.

For more information about using the PowerPack, see the **Restorepoint SyncPack** manual.

Included Features

This release includes the following features:

- The "Restorepoint Connectivity" Dynamic Application, which validates the type of credentials used by Restorepoint.
- Event policies for Restorepoint.
- A device class for Restorepoint devices.
- A device group called "Restorepoint Devices", which includes a dynamic rule that matches devices with aligned Dynamic Applications, including the "Restorepoint Connectivity" Dynamic Application.
- The Restorepoint MIB is embedded in the **Documentation** section of the PowerPack, and the MIB must be loaded before you can use the PowerPack. For more information, see the **Restorepoint SyncPack** manual.

Enhancements and Issues Addressed

The following issue was addressed in this release:

- An issue was addressed in which the SSH/Key credential would attempt to use only port 22 even when a custom port was entered in the credential.

Known Issues

Version 103 of the "Restorepoint" PowerPack has no known issues.
