

Skylar Compliance Automation PowerPack Release Notes

Version 200

Overview

Version 200 of the "Skylar Compliance Automation" PowerPack includes the use of the Restorepoint v2 API, which includes updated credential handling, run book action policies, and run book automation policies to work with the new API.

This PowerPack works in conjunction with the "Datacenter Advanced Enrichment Actions" PowerPack.

This document covers the following topics:

<i>Before You Install or Upgrade</i>	2
<i>Installation and Upgrade Process</i>	3
<i>Enhancements and Issues Addressed</i>	3
<i>Known Issues</i>	3

Before You Install or Upgrade

Ensure that you are running version 12.3.x or later of Skylar One before installing the "Skylar Compliance Automation" PowerPack.

NOTE: For details on upgrading Skylar One, see the relevant [Skylar One Platform Release Notes](#).

CAUTION: You must install version 103 of the "Datacenter Automation Utilities" PowerPack before proceeding. You can access this PowerPack from the **PowerPacks** page on the [ScienceLogic Support Site](#).

Installation and Upgrade Process

NOTE: If you are currently using the Dynamic Applications in this PowerPack to monitor devices, collection errors might occur for one or two polling cycles during the installation of a new version. To prevent collection errors during an upgrade, you can optionally disable collection for monitored devices before performing the following steps and re-enable collection after the upgrade.

To install this PowerPack:

1. Search for and download the PowerPack from the **PowerPacks** page at the [ScienceLogic Support Center](#) (Skylar One > PowerPacks).
2. In Skylar One (formerly SL1), go to the **PowerPacks** page (System > Manage > PowerPacks).
3. Click the **Actions** menu and choose *Import PowerPack*. The **Import PowerPack** modal appears.
4. Click **[Browse]** and navigate to the PowerPack file from step 1.
5. Select the PowerPack file and click **[Import]**. The **PowerPack Installer** modal displays a list of the PowerPack contents.
6. Click **[Install]**. The PowerPack is added to the **PowerPack Manager** page.

Enhancements and Issues Addressed

The following enhancements and issues were addressed in this release:

- Updated the PowerPack to use the Restorepoint v2 API, instead of the legacy v1 API endpoints. Updated the following items in the PowerPack:
 - Updated API token authentication using the Basic/Snippet credential. The API token is securely retrieved from the credential configuration rather than being hardcoded.
 - Updated the run book actions and run book automations to work with the new API.
- Resolved an issue where the following run book actions failed with a gzip decompression error:
 - Restorepoint: Difference between Last Two Backups
 - Restorepoint: Link to Last Configuration Backup
 - Restorepoint: Revert Backup

(Cases: 00695958, 00701115, 00706172) (Jira ID: INT-7732)

Known Issues

This release has no known issues.
