

Supplemental Device Class PowerPack Release Notes

Version 104

Overview

Version 104 of the *Supplemental Device Class* PowerPack adds device classes from multiple different PowerPacks.

- **Minimum Required Platform Version:** 11.1.0

This document covers the following topics:

Before You Install or Upgrade

Ensure that you are running version 11.1.0 or later of SL1 before installing *Supplemental Device Class* version 104.

NOTE: For details on upgrading SL1, see the appropriate [Release Notes](#).

Installation Process

TIP: By default, installing a new version of a PowerPack will overwrite all content in that PowerPack that has already been installed on the target system. You can use the **Enable Selective PowerPack Field Protection** setting in the **Behavior Settings** page (System > Settings > Behavior) to prevent the new version of the PowerPack from overwriting local changes for some commonly customized fields.

NOTE: If you are currently using the Dynamic Applications in the PowerPack to monitor devices, collection errors might occur for one or two polling cycles during the installation of a new version. To prevent collection errors during an upgrade, you can optionally disable collection for monitored devices before performing the following steps and re-enable collection after the upgrade.

To install this PowerPack:

1. Familiarize yourself with the [Known Issues](#) for this release.
2. See the [Before You Install or Upgrade](#) section. If you have not done so already, upgrade your system to the 11.1.0 or later release.
3. Download the "Supplemental Device Class" version 104 PowerPack from the Support Site to a local computer.
4. Go to the **PowerPack Manager** page (System > Manage > PowerPacks). Click the **[Actions]** menu and choose *Import PowerPack*. When prompted, import "Supplemental Device Class" version 104.
5. Click the **[Install]** button. For details on installing PowerPacks, see the chapter on *Installing a PowerPack* in the **PowerPacks** manual.

Features
