

Skylar AI Release Notes

Version 2.5.1: Skylar Advisor

Overview

Skylar AI is a software services suite powered by artificial intelligence (AI) that automatically manages, anticipates, and prevents IT incidents. Version 2.5.1 of Skylar AI includes an update to only Skylar Advisor. Please note that Skylar Advisor currently requires Skylar Analytics.

The following table lists the minimum and recommended versions of ScienceLogic software required for Skylar AI and its components:

Product	Minimum Version	Recommended Version
Skylar One	12.3.14 (for the 12.3 line) 12.5.7 (for the 12.5 line)	12.3.15 or later 12.5.21 or later
AP2	8.18.43-81 (Jelly Bean)	9.13.1-14 (Quesito) or later

This document covers the following topics:

Issue Addressed in Version 2.5.1	2
Known Issues	2

Issue Addressed in Version 2.5.1

The following issue for Skylar Advisor was addressed in this release:

- Addressed an issue where Skylar Advisor did not properly create Advisories due to an issue with the export process. (Jira ID: SKY-4846)

Known Issues

This section lists the known issues for Skylar Advisor for this release.

- A Skylar AI instance can ingest telemetry from multiple external sources, but only *one* Skylar One system should be configured to send telemetry to that Skylar AI instance to prevent data collisions and potential data corruption. To avoid this situation, do not reuse a Skylar AI authentication token with more than one Skylar One systems that are sending data to that Skylar AI instance. (Jira ID: SKY-3538)
- If the session inactivity timeout value for a Super User or a standard user is adjusted on the **Authentication** page ( > Account Access > Authentication) of Skylar Settings, the affected user does not get logged out after the new timeout value expires (if that user is currently logged in and remains inactive). (Jira IDs: SKY-3734, SKY-3732)
